DERMATOLOGICAL
E45

The 'itch' of eczema is recognised by doctors and sufferers alike to be the worst symptom of the condition, causing sleep disturbance in 85% of cases!

Scratch resistance

We've drawn upon 50 years of skincare experience to formulate E45 Itch Relief Cream specifically to help ease this distress.

Moisturising urea and local anaesthetic lauromacrogols combine in a dual action formula to soothe the itch whilst hydrating and smoothing the affected skin! These therapeutic benefits are delivered in a well tolerated and highly acceptable emollient cream.

A "very good" or "good" improvement in skin condition was measured in 74% of patients!

E45 Itch Relief Cream.
Experience builds expertise.

Dry skin & Eczema

EXPERTE4SE

CROOKER HEALTHCARE

Prescribing Information E45 Itch Relief Cream. E45 Itch Relief Cream contains lauromacrogols 3.0% w/w and urea 5.0% w/w. **Uses:** For the treatment of pruritus, eczema, dermatitis and scaling skin conditions where an antipruritic and/or hydrating effect is required, it may also be used for the continued treatment and follow-up treatment of these skin diseases. **Dosage and administration:** Adults, the elderly and children: Apply to each affected area twice a day. The duration of treatment depends on the clinical response. **Contra-indications:** Patients with known hypersensitivity to any of the ingredients. It should not be used to treat acute erythroderma, acute inflammatory, oozing or infected skin lesions. **Special warnings and precautions for use:** May cause irritation if applied to broken or inflamed skin. **Pregnancy and lactation:** There are no specific restrictions concerning its use during pregnancy, but it is not to be used on the breasts immediately prior to breast feeding during lactation. **Undesirable effects:** E45 Itch Relief Cream has been reported to cause a burning sensation, erythema, pruritus or the formation of pustules. **Contact allergy:** has also been reported. **Package quantities:** 50g and 100g tubes. **MRSP:** 50g £3.39, 100g £5.44. **Legal category:** GSL. **Product licence number:** PL 00327/0122. **Product licence holder:** Crookes Healthcare Ltd, Nottingham, NG2 3AA. **Date of preparation:** December 2003. **References:** 1. Heartburn Relief 10mg Tablets
Omeprazole

Advanced treatment
for up to 24 hours

14 Tablets

Quality medicines at careful prices

Product Information. **Presentation:** Each Care heartburn relief tablet contains 10mg of omeprazole. **Uses:** Relief of reflux-like symptoms (eg heartburn). **Dosage:** Adults over 18 years only – 20 mg once daily before a meal. If symptoms return, increase to 10 mg daily, returning to 20 mg if symptoms return.

Contraindications: Hypersensitivity. **Precautions:** Refer to doctor if no relief within 2 weeks, or if symptoms persist for more weeks to control symptoms, aged over 45 with new or worsening symptoms, unintentional weight loss, anaemia, gastro-oesophageal reflux, difficult or painful swallowing, persistent vomiting or vomiting blood, epigastric mass, previous gastric ulcer or surgery, jaundice, any other significant medical condition (including hepatic or renal

impairment), or pre-endoscopy. **Interactions:** Diazepam, phenytoin, warfarin, ketoconazole, itraconazole, clobazam, voriconazole, digoxin, tacrolimus, 13 C-urea breath test. **Side effects:** Skin rash, urticaria, pruritus, photosensitivity, bullous eruption, erythema multiforme, Stevens-Johnson syndrome, toxic epidermal necrolysis, alopecia and increased sweating. Arthritic and myalgic symptoms, bronchospasm, diarrhoea, constipation, abdominal pain, nausea/vomiting, flatulence, dry mouth, stomatitis and candidiasis. Increases in liver enzyme levels, encephalopathy in patients with pre-existing severe liver disease, hepatitis with or without jaundice and hepatic failure. Interstitial nephritis resulting in acute renal failure, gynaecomastia, impotence, headache, paraesthesia. Taste disturbances, mental confusion, agitation,

depression, hallucinations, aggression blurred vision, blood disorders, hyponatraemia, vertigo, anaphylactic shock and angioedema, dizziness, light-headedness, feeling faint, somnolence, insomnia, peripheral oedema, malaise and fever. **Legal Status:** P. **Trade Price:** £20.46 (per 6 outer). **Product Licence Number:** PL 14017/0069. **Licence Holder:** Dexcel-Pharma Ltd, 1 Cottesbrooke Park, Heartlands Business Park, Daventry, Northamptonshire, NN11 5YL. **Distributed by:** Thornton & Ross Limited, Linthwaite, Huddersfield, West Yorkshire HD7 5QH Tel: 01484 842217 **Date of Preparation:** April 2004

Pharmacy faces retention crisis

by Asha Fowells

afowells@cmpinformation.com

Pharmacist retention must be addressed if existing and new services are to be delivered, a pharmacy workforce expert has told the Royal Pharmaceutical Society's Council.

As part of a presentation at last week's Council meeting, Manchester University's Karen Hassell highlighted that 30 per cent of the Register was 'inactive' and a third of the remaining 70 per cent worked part-time.

"Can services, both existing and new, be delivered when such shortcomings exist?" asked Dr Hassell, a senior research fellow and last year's C&D BPC Practice Research Award Medal winner.

The profession also needed to look at ways of keeping female pharmacists. Women form the majority of the Register but appear to leave or reduce their hours quickly after qualifying, without necessarily returning to work full-time, she said.

A further issue was the 17 per cent of people who started undergraduate pharmacy courses but failed to register with the Society. "Is the attrition rate from university to registration acceptable?" Dr Hassell asked.

Council member Linda Stone

said many students quit their pharmacy studies early because of financial hardship or an inability to cope. In addition, she said, overseas students only received funding for UK courses if they agreed to go back to their home country after graduation.

Dr Hassell agreed more analysis was needed, but said the attrition rate was much higher than perceived, and the future of the profession relied on the student pipeline.

Council member Gerald Alexander said the figures showed potential for future failure in service delivery, especially in light of the new contract, so it was good the schools of pharmacy were expanding. Fellow member Clive Jackson said it was important to ensure the number of pre-registration placements matched the increasing student population.

RPSGB research and development head Sue Ambler said pharmacy workforce planning was difficult because schools of pharmacy were funded through the Higher Education Funding Council for England. The formal workforce planning that had led to more undergraduate medicine places was due to the profession's Department of Health funding.

Karen Hassell, senior research fellow at Manchester University, urged the profession to look at its retention

A further complication was that pre-registration and undergraduate training were funded separately, Dr Ambler pointed out. But the Society was working with health departments to map supply and demand and build a model for now and the future, she added.

Mrs Stone asked if the number of women who dropped out of practice was due to the rising proportion of ethnic minorities who made up the Register. Dr Hassell said this was unlikely as women from ethnic minorities tended to have extended families and fewer childcare issues, so often worked for longer.

ENGLAND

Reminder on community pharmacy use for PCTs

An aide memoire to help PCTs integrate community pharmacy chronic disease management into their existing plans has been published by the NHS Modernisation Agency.

It highlights the increased contact patients with long-term conditions have with their community pharmacist and how this presents opportunities to identify at-risk patients before they require hospital treatment.

It points to services available under the new pharmacy contract, like repeat dispensing and medicines use review, as ways of improving pharmacy use.

The aide memoire also shows community pharmacists' potential to be involved in patient care from advising on OTC medication to acting as advance primary practitioners or mentoring advanced primary nurses to support complex patients.

In addition, it suggests pharmacists could ensure safe hospital discharge for highly complex patients by providing medicines support in the community. Positive outcomes for patients can be maximised by integrating pharmacy input into care pathways, as some patients visit pharmacies to self-medicate without informing their GP.

For more information:

www.natpact.nhs.uk

PSNC announces 20 dates for contractor roadshows

PSNC has announced 16 roadshows across England from the end of October to inform contractors about the new contract. Community Pharmacy Wales has detailed a further four.

Contractors will watch a presentation and have a chance to ask questions about the new contract at the roadshows, which are being held between October 20 and November 14.

Community pharmacy contractors and their authorised managers can attend all roadshows in England, while those in Wales are restricted to their authorised

managers and LPC members.

PSNC's new contract negotiating team – Sue Sharpe, Alastair Buxton and Steve Williams – will make presentations. PSNC is also producing a book, which will be sent to contractors shortly.

Contractors will be balloted on the contract during and after the events.

PSNC will also be holding a one-day conference on implementing the new contract on November 3.

For more information:

www.psnc.org.uk

Small pharmacies fear contract will not suit them

Pharmacies with small prescription volumes are seeking assurances from PSNC and the Government that they will still be viable under the new contract.

London Forum LPC has asked the DoH for reassurance that smaller pharmacies will not be disadvantaged under the contract and that current arrangements for support, such as the practice allowance and the Essential Small Pharmacy Scheme, are reflected in the new contract.

But the DoH said it was unable to give a detailed response as discussions were continuing.

PSNC said it would not provide any information about specific aspects of contract funding "until we are able to give the whole picture. This will be available very shortly – within the next two weeks".

Liverpool LPC has said it would like to see a guarantee of at least a continuation of the current level of remuneration.

Sheffield LPC accepted that there would be losers but suggested the inclusion of an exit strategy to compensate those who chose to relinquish their contracts under the new rules.

"Many of the recommendations will not be appropriate in hospital. If this report becomes law, it will be unenforceable," she said.

He urged pharmacists to liaise with GPs to ensure that any rescheduled vaccine clinics in GP practices tied in with pharmacy stock deliveries.

The UK Government is expected to publish its formal response to the consultation in the next couple of months.

Merck faces Vioxx lawsuit

by Fiona Salvage

f.salvage@cmpinformation.com

MSD's US parent company Merck could be facing a class action lawsuit brought against them by British patients who were taking Vioxx before last month's withdrawal.

Solicitor Mark Harvey from Hugh James Solicitors, Cardiff, told *C&D* that "a steady stream" of people had contacted him about Vioxx, although he estimates that only a small group of UK patients would finally file a lawsuit against Merck.

A class action lawsuit would be brought in the US rather than the

UK because of the more favourable legal system there, as there is no risk of paying the opponent's legal costs if the claimants lost the case. In addition, there is no automatic right to bring the claim in the UK, as Merck is a US company, Mr Harvey explained.

However, a Merck spokesman said: "While we are declining to comment on the specifics of any litigation brought against Merck we continue to believe that we have meritorious defences to the lawsuits brought against us."

Only patients who are able to demonstrate that their heart problems were not likely to have

been caused by any factor other than Vioxx would be able to bring a claim, Mr Harvey said.

● MSD has announced it will reimburse prescription charges for patients who were taking Vioxx or Vioxxacute when the company withdrew the product last month.

Patients who were not exempt from prescription charges can call a freephone number – 0800 106024 – leave their name and address in order that a reimbursement form can be sent to them, which they return to MSD along with the empty Vioxx box in the reply-paid envelope supplied.

EU moves to improve children's medicines

Europe has taken the first step to improve children's medicines by offering incentives for pharmaceutical companies who conduct clinical trials into paediatric medicines.

The European Commission has adopted a proposal that aims to ensure medicines are researched and developed specifically for children's therapeutic needs. The proposal will now go to the European Parliament and could become law in late 2006. It will involve, *inter alia*: a dedicated expert committee within the European Medicines Agency to assess companies' testing plans; an additional six-month extension to the product's patent as a reward for a company's R&D expenditure; off-patent medications attracting 10 years of data protection for new studies; EMEA to provide free scientific advice for the industry.

The proposal will increase the number of medicines tested and licensed for children. Previously, pharmaceutical companies have not seen a sufficient return on their investment for R&D in children's medicines. Europe has adopted a method used in the USA, which grants companies an extra six-months' patent-exclusivity for a product tested in children. Orphan medicines will attract an additional two-years' market exclusivity to the existing 10 years' exclusivity currently given under EU law.

Pilot medication review leads to change

A pilot project to identify older people who potentially needed pharmaceutical care has published its final report.

The project, which included pharmacies in Lambeth, Croydon and Enfield PCTs, identified 50 older people with potential pharmaceutical care needs from four trigger questions. As a result of the review, 88 per cent of those identified had an alteration or change made to at least one medication and 40 per cent of prescribed medicines were changed.

After the pilot, patients were referred to a community pharmacist who implemented the pharmaceutical care package and

monitored and reviewed the package after six months. In addition, 25 patients needed the community pharmacists' support to manage their medicines better. The model is being adapted for

use in other areas.

The four trigger questions were designed to identify access, compliance, day to day management and clinical issues experienced by older people. They were:

- Do you need help getting a regular supply of medicines?
- Do you always take all of your medicines the way that your doctor wants you to?
- Can you swallow and use all of your medicines and get all of your medicines out of their containers?
- Do you think that some of your medicines could work better?

The project was a runner up in the RPSGB's Pharmaceutical Care Awards last year.

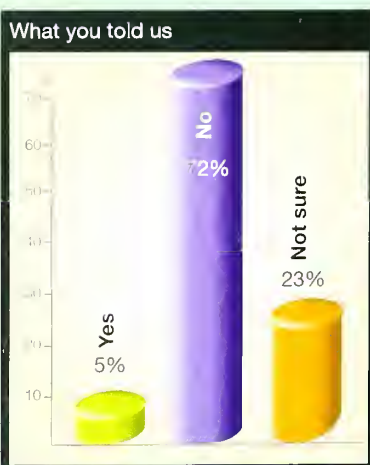

Questiontime

Last week we asked you: Will handing budgetary control to GPs be beneficial to pharmacies? You replied (see right):

This week's question: Which option do you think is the best answer to the pensions crisis?

- Compulsory payments
- A rise in taxes
- Raising the retirement age
- Keeping voluntary payments

Visit our record your vote on our website: www.dotpharmacy.com. You have until noon on October 19 to cast your vote. We will publish the results in *C&D*, October 23.

EMEA review of Cox-2 inhibitors

The European medicine regulator is conducting a review into Cox-2 inhibitors' cardiovascular safety following MSD's withdrawal of Vioxx (rofecoxib) last month.

The European Medicines Agency's Pharmacovigilance Working Party and the Committee for Medicinal Products for Human Use will meet this month to determine if further action is needed.

Quittin' with NiQuitin

NiQuitin CQ 2mg/4mg Lozenge and Mint Lozenge (nicotine) for relief of nicotine withdrawal symptoms during smoking cessation. **Dosage:** Adults only. 4 mg if smoke within 30 minutes of waking. 2 mg if longer. Stop smoking completely. Weeks 1 to 6, 1 lozenge every 1 to 2 hours (min. 9 max. 15/day), weeks 7 to 9, 1 lozenge every 2 to 4 hours, weeks 10 to 12, 1 lozenge every 4 to 8 hours. Weeks 13-24, 1 to 2 lozenges per day only when strongly tempted to smoke. **Contraindications:** Non-smokers, those under 18, PKU, recent MI/stroke, severe arrhythmias, unstable/worsening heart failure,

angina, hypersensitivity. **Precautions:** Hypertension, peptic ulcer, severe kidney/liver impairment, pheochromocytoma, hyperthyroidism, diabetes, cardiovascular disease, low sodium diet. Swallowed nicotine may exacerbate oral/pharyngeal inflammation, oesophagitis, gastritis, peptic ulcer. **Interactions:** Concomitant medication may need dose adjustment. **Side effects:** Depression, irritability, anxiety, insomnia, headache, dizziness, cough, cold. Nausea, hiccup, flatulence, GI disturbance, appetite change, oral irritation/ulceration, nightmares, restlessness, mood change, pharyngitis, thirst,

taste/sensory disturbance, dyspnoea, respiratory disorders, rashes, itching, sweating, numbness, flushes, vascular disorders, halitosis, chest pain, throat swelling, leg oedema, pain, malaise, wakefulness, palpitations, tachycardia, tooth/jaw ache, nocturia. **Pregnancy/lactation:** Try without nicotine replacement therapy. Medical assessment of risk/benefit if necessary. **GSL PL:** 00079/0369, 0370, 0373 & 0374 **PL holder:** GlaxoSmithKline Consumer Healthcare, Brentford, TW8 9GS, U.K. **Pack size and RSP:** 36's £8.99, 72's £17.49. **Date of last revision:** March 2004

Minister plans to secure debate on control of entry

by Adrienne de Mont

ademont@cmpinformation.com

Kerry Pollard, Labour MP and chairman of the All-Party Small Business Group, is confident of securing an adjournment debate on the proposed changes to pharmacy control of entry rules.

Mr Pollard is one of the main signatories of an Early Day Motion recognising that "rather than assisting consumers, new entry exemptions for large shopping developments and pharmacies opening for more than 100 hours a week could harm their interests by putting small local pharmacies out of business".

By this Wednesday the EDM had attracted 42 signatures from cross-party MPs, but the motion will fall on November 17, so the protagonists will have to start collecting signatures again when Parliament re-opens on November 23. The benefit of an EDM is that, whenever it is signed, it appears on the "orders of the day", attracting the attention of other MPs and, importantly, relevant ministers.

"An EDM is an expression of interest," said Mr Pollard. "It is never debated but acts like a petition, drawing attention to a particular issue. Any motion that attracts 100 signatures or more should make the Government sit

Kerry Pollard, Labour MP and chairman of the All-Party Small Business Group

up and take notice."

The All-Party Pharmacy Group (of which Mr Pollard is a member) will then press for an adjournment debate, extolling the virtue of pharmacies from the point of view of their role in the Government's health agenda. A health minister will be obliged to attend the 90-minute debate and it is hoped that this will be Rosie Winterton, the minister responsible for pharmacy.

Mr Pollard urged pharmacists to contact their MPs and persuade them to sign the EDM again when Parliament reconvenes at the end of November.

"Then, hopefully, when we get the adjournment debate, we can say we have an extraordinary amount of support for small pharmacies."

Mr Pollard's interest in independent pharmacy stems not just from his interest in small businesses but also from a concern to preserve a community network of pharmacies.

His St Albans constituency is home to the NPA, with whom he has worked closely in the past. He said he has been impressed by NPA board member Graham Phillip's pharmacy in Letchworth, which offers health checks, such as blood pressure and body mass index measurements, and has an interactive screen where customers can get advice on a range of health topics.

"These pharmacy services can give reassurance without the need for people to see a doctor. The public can easily drop into a pharmacy for health and medicines advice while doing their shopping – it's an agenda the Government hasn't quite got hold of yet."

He said it was unfair that an independent pharmacist has to invest personally in the health facilities offered, whereas other health professionals have it provided for them.

Patients take action over Epilim

Patients who took an anti-epileptic while pregnant and claim their children suffered neural tube defects as a result are threatening action. Solicitor David Body, of law firm Irwin Mitchell, said three clients were preparing to file liability claims under the Consumer Protection Act against Sanofi-Synthelabo (now part of Sanofi-Aventis), maker of Epilim (sodium valproate).

Mr Body added the firm was investigating a further 30 cases.

In a statement, Sanofi-Aventis explained the risk of congenital abnormalities in children born to mothers with epilepsy who take any established anti-epileptic drug was two to three times higher than in mothers without epilepsy. This information had been known to doctors and included on patient information leaflets for many years, the company added.

Mr Body said mothers who suffered with epilepsy faced an "impossible dilemma" of either discontinuing drug treatment and suffering seizures that could harm them and their unborn child, or continuing with the drug and running the risk of foetal defects.

Welsh patient pilot a success

Wales' health minister Jane Hutt has hailed a patient training programme a success and called for its roll-out across Wales in the coming years.

The Expert Patient Programme, a six-week course for patients with long-term conditions, was piloted in Gwynedd and Swansea Local Health Boards for 12 months.

Ms Hutt said the programme should be "central to the system of care" provided to people with long-term conditions. "I am keen to see this initiative replicated across Wales and we are working to ensure that it's rolled out in all local health boards."

The programme focuses on teaching patients coping skills, dealing with stress, depression, pain and using relaxation techniques.

IT costs come as no surprise

The news that the cost of the NHS computer network may be five times the original estimate is no shock for experts in pharmacy IT.

Ian Shepherd, formerly in charge of IT at the Royal Pharmaceutical Society and now running Synapse Consulting, told *C&D* that, in his experience, the capital expenditure on equipment for large-scale projects usually represents only a small proportion of the total costs. Training staff to use the system, the management of the system and the organisation's change in other ancillary systems could increase costs by up to 100%. The Health Department of

Health announcement, that the eventual costs of the NHS Programme for IT could reach £30 billion over 10 years, compared with the £6bn procurement costs agreed two years ago, is in line with what is generally accepted in the IT industry.

Nigel Cox, NPA pharmacy systems development manager, said capital and projected running costs of the pharmacy systems were all being taken into account in the new contract negotiations.

So, while the NHS Confederation is concerned that trusts might have problems funding the local running costs of the national programme, Mr Cox said the pharmacy programme

Nigel Cox, NPA pharmacy systems development manager

was a separate issue. Contractors would be funded centrally to provide advanced services, although negotiations were still underway as to the exact amounts.

COMPACT

Service standards to be 'enhanced'

The Royal Pharmaceutical Society will set standards for pharmacies offering enhanced services under the new contract, PSNC chief executive Sue Sharpe has said.

During a debate on the new contract at last week's RPSGB Council meeting, Mrs Sharpe said the Society's *Code of Ethics* set a very good framework for standards. But the Society will need to discuss how its inspectorate could support PCTs which will be responsible for monitoring pharmacies providing enhanced services, she told members.

Academic institutions would accredit pharmacies offering advanced services and PSNC is working towards standardising accreditation for those premises, Mrs Sharpe said in response to Council member Clive Jackson's query.

Gerald Alexander suggested the RPSGB should oversee the process with other pharmacy bodies, with coordination by the College of Pharmacy Practice.

Responding to a question from Hemant Patel, Mrs Sharpe said she did not expect many pharmacists to become prescribers over the next couple of years because most lacked the commitment to undergo training. But, as medicines use reviews

develops, pharmacists will want to alter prescription details such as dosage and enthusiasm will increase.

This will lead to pharmacist prescribing moving from a locally commissioned service to the essential tier of the contract, she added.

Graham Phillips said pharmacist prescribing could lead to "postcode pharmacy" because only certain PCTs would commission such services through community pharmacy, depriving patients in neighbouring PCTs.

Mrs Sharpe said the issue was beyond the scope of the contract, but if there was a national need for a service, it would be moved to the advanced tier of the contract with extra funding.

Other questions were raised by Mr Patel who expressed concern that pharmacy numbers would not remain stable enough over the next five years to take the new contract forward, and Hassan Argomandkhah, who highlighted that changing the practice allowance threshold could result in pharmacies closing and impact on public health.

In addition, Mrs Sharpe confirmed all contractors would be balloted, despite NE London LPC's dispute with PSNC.

The reality of quitting in pharmacy

October 6th – Chris follows his heart and gets help.

Chris takes tablets for high blood pressure, and has been advised to stop smoking. Worried about his willpower, his wife Debbie offered to give up with him. Last week, prompted by Debbie, they came to talk to me about ways of quitting.

Chris and Debbie didn't know much about NRT so I took them through the different options, explaining how they work and what to expect. Wary of using a 'plastic cigarette', they initially seemed interested in gum and lozenges, but finally opted for patches for their round-the-clock action.

With my advice and their mutual support, Chris and Debbie have made a great start. I'm looking forward to seeing them soon to find out how they get on.

*Julie Longstaff, Pharmacist
Richmond Pharmacy*

FOCUS

CHRE asked to confirm witness confidentiality

RPSGB Council members are seeking reassurance that health regulator CHRE will not infringe people's privacy rights during disciplinary hearings.

CHRE has a duty to examine hearings it considers may have been too lenient. At its public meeting in September, the body agreed that it was entitled to see all evidence that had been available to a health profession's regulatory body, whether or not the regulator's disciplinary committee had seen it.

This would include all evidence heard *in camera*, but CHRE agreed that such evidence would be treated confidentially.

However, at last week's Council

meeting at the RPSGB, Linda Stone wanted assurance that the anonymity of witnesses who did not want to be identified when giving evidence would be maintained. She pointed out that witnesses may give personal details *in camera* which could also be revealed inadvertently at a later CHRE hearing.

"The issue is complex," she said. "The courts deal with this in different ways so there has to be some reassurance that certain issues that are brought out in confidence at a hearing are not then made public before the CHRE. We do not want people to be frightened of speaking at hearings."

Shoplifting fixed fines 'ill-conceived'

The British Retail Consortium is continuing to object to the Government's proposals to introduce fixed penalty fines for people caught shoplifting.

The proposals, due to come into effect from November 1, would mean that shoplifting is being decriminalised, says the BRC, and that it will encourage shoplifting of lower value items, as well as failing to deter criminal damage.

The Home Office proposals would allow police officers to issue £80 fixed penalties to

shoplifters for a theft of goods worth up to £200 instead of facing prosecution.

The offender would also escape a criminal record if the fine was paid within 21 days.

The fixed penalty proposals would also apply to people causing up to £500-worth of criminal damage.

Representatives of the BRC have been meeting with the Home Office, but this week the Consortium reiterated its objections to the current proposals, saying that the

measures are "ill-conceived, rushed through without proper consultation and will undermine retailers' efforts to tackle crime in their stores".

In a response last month to the Government's proposals, the BRC said: "Theft from retail outlets is being singled out as a lower priority than other types of crime."

The organisation is calling for penalty notices to be allowed only for thefts up to £20 or for criminal damage up to a value of £50. It says that penalty notices

must not be used for repeat offenders within a three-year period, and that the issuing of a penalty notice for theft and criminal damage must result in a criminal offence being recorded on the Police National Computer.

The BRC says police officers must also make the victim's views the overriding factor in determining the appropriate course of action, rather than just issuing a fixed penalty.

Diabetes screening wins media award

Lloydspharmacy has won the Corporate Social Responsibility Award at the *Marketing Week Effectiveness Awards 2004*.

Announced last week, the award was presented to Lloydspharmacy for its work in raising awareness of its nationwide free diabetes testing service. So far the pharmacy chain has screened more than 500,000 people with 25,000 having been referred to their GPs. The service is offered in more than 1,200 of the chain's 1,364 pharmacies.

Other nominations in the category included BBC Children in Need, the British Gas Here to Help programme, and Walkers

Snacks' Comic Relief Sponsorship. Lloydspharmacy's commercial director, Mark

Green, collected the prize from former Conservative leader William Hague.

Abolish VAT on EHC, says group

VAT on OTC contraceptives should be abolished to reduce unwanted pregnancies and sexually transmitted diseases, Government advisers have said.

The cost of condoms and emergency hormonal contraception is "prohibitively expensive for many people", said the Sexual Health and HIV Independent Advisory Group in its annual report.

It also called for free condoms to be more widely available through the NHS. The report said cost was a disincentive to consistent use, particularly to young people and those on low incomes.

Other recommendations included increasing availability of free pregnancy tests, promotion of local sexual health services with emphasis on their confidentiality, national roll-out of the chlamydia screening programme within the next two years, and PCT setting of local targets for sexual health.

Numark enhances generics scheme

Numark has teamed up with APS Berk to improve its Contract Pricing generics scheme with an additional loyalty discount.

CPXtra will offer "highly competitive" prices on a range of

more than 400 APS Berk generic prescription products, including Numark dual brands.

As well as the four basic rebate levels of Contract Pricing, extra discount will be available depending on how much of their total generics spend a member commits to the programme. The basic rebate is paid monthly, while loyalty rebates will be paid quarterly (see panel) and will be calculated from PMR data and wholesaler invoices.

As the CPXtra scheme includes a range of monthly special offers and a twice daily service from a Numark wholesaler, the scheme should offer competitive pricing, continuity of supply and a full line wholesale service.

Numark professional services

controller Mimi Lau said: "With the implementation of the new contract, pharmacists need to assess how they are going to make the best use of their time - especially with a view to gaining access to the funding available."

"Sourcing of generics can be a time-consuming activity, so a scheme like this enables pharmacists to maximise their generics profit without compromising their time in having to search through price lists for the best deals."

"They can then invest their time in other profitable areas of the business."

Basic rebate:

Threshold	
Rebate	
0-£399	0 per cent
£400-£999	18 per cent
£1,000-£1,999	20 per cent
£2,000+	Contract pricing

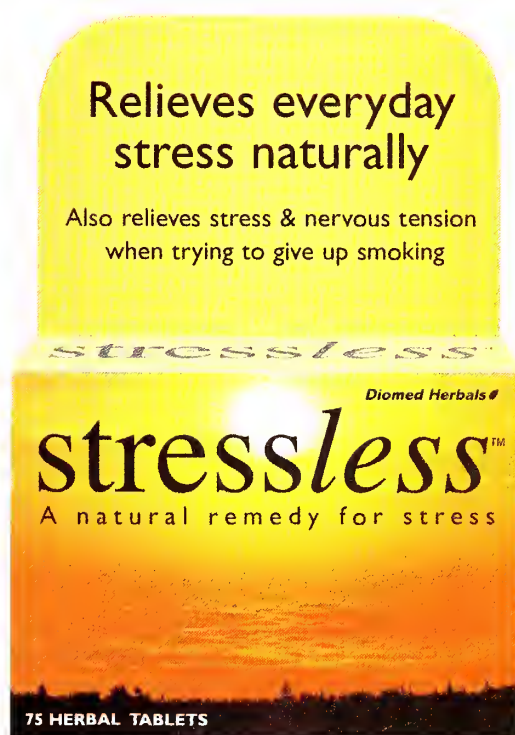

Loyalty rebate:

Compliance	Rebate level
0-5 per cent	Rebate as above plus 4 per cent
5-10 per cent	Rebate as above plus 7.5 per cent

Moss in more Waitrose stores

Supermarket chain Waitrose is working with Moss Pharmacy to open five more in-store outlets following recent acquisitions from Safeway. The first to open was in Worthing, and this will be followed by Abergavenny, Harrogate, Sheffield and Wolverhampton.

Naturally Profitable

hops, scullcap, valerian and vervain

- Stressless is a natural remedy for everyday stress
- Stressless also relieves stress and nervous tension when trying to give up smoking

Relieves everyday stress naturally

STRESSLESS Trademark and Product Licence held by Diomed Herbals, Hitchin, Herts, SG4 7QR, UK. Distributed by DDD Ltd, 94 Rickmansworth Road, Watford, Herts, WD18 7JJ, UK. **Directions:** To be taken by mouth. Adults and elderly Two tablets three times a day. In severe cases three tablets three times a day for two weeks, then two tablets three times a day. Children 8-12: One tablet twice a day at the discretion of the practitioner. For smoking withdrawal Three tablets three times a day. Do not exceed the stated dose. **Indications:** A herbal remedy traditionally used for stress and nervous tension associated with the changing demands of modern life. Also provides progressive relief of mild anxiety, and relieves nervous strain while giving up smoking. **Contra-indications:** Not to be used if sensitive to any of the ingredients. Not to be used during pregnancy or lactation. Not to be taken by children under 8 years. **Legal category:** (GSL) **Packs:** Stressless (PL 17418/0002) – 75 Tablets, RSP £5.95 (£5.06 excluding VAT)

Long-term relief

The time is now for tackling treatments for long-term conditions. Fiona Salvage reports

A window of opportunity for the NHS to determine how it will treat and manage long-term conditions is open, but it won't stay open forever.

This was one of the messages delegates heard at the *Health Service Journal* conference on Managing Long Term Conditions, held last week in London. Speakers from the Department of Health, the King's Fund and various PCTs expressed their thoughts on how to manage long-term conditions such as diabetes, COPD and heart failure. The speakers generally agreed on three things: an integrated service was needed without the barriers between primary and secondary care (indeed, abandoning the very terms was mooted); American models of healthcare offer good suggestions, but not all the answers; and a pyramid model to identify which patients required the most care.

Maybe we spend too much time reviewing patients whose condition is stable, proposed David Colin-Thomé, DoH primary care national clinical director. If healthcare professionals come together they can have a big impact on health inequalities, he said. Pharmacists have a key role within this and the new pharmacy contract will "have incentives for some community pharmacists to be clinical providers for chronic disease

management. They are a key element of support of people with long-term conditions. It is a fantastic opportunity that was not fulfilled in the past".

The NHS has a target to reduce the number of emergency bed days by 5 per cent by 2008, but because of chronic disease this target is harder than it appears, warned Gary Belfield, DoH policy lead for chronic disease. The increasing number of patients with chronic disease means the reduction in real terms is nearer 12 per cent, he stressed. Tackling long-term conditions needs strategic partnerships: voluntary, community and patient groups are as useful as healthcare professionals. "We can't go about [treating people with long-term conditions] in the same way as the past – we need to be more systematic." He said the DoH's policy is to prioritise: high intensity users of the NHS need case management, but he warned there are no central funds or pilots for developing new models. "The ministerial line is that the money is out there. We are discouraging pilots, but want the NHS to think broadly – not just in the public sector, but in the private sector."

Of what the DoH was yet to sort out, he said: "We haven't got payment by results working for long-term conditions, but we're working hard to make it fit at the moment." It's also about

Now is the time to look at the management of long-term conditions

delivering the workforce but, Mr Belfield cautioned, timing is important: "If we don't do this now, the opportunity will be lost. The politicians are looking the right way, but in a few years time it won't be the top political priority. I think we can change the world on this one."

Encouraging patients whose conditions are stable to take charge of their condition frees clinicians' time for closer monitoring of more complex

patients suggested Steve Henderson. As a GP and associate medical director of Greater Manchester SHA, Dr Henderson recommended empowering patients through education to manage their own conditions. This should also prevent them moving up the "pyramid" where they require more intensive care and treatment, he says.

The top of the pyramid contains the fewest patients yet attracts the highest cost. This

paracetamol and codeine

Burning questions answered

The new NICE guidelines on dyspepsia are strongly supportive of self-care for most heartburn patients. What does this actually mean for pharmacists and GPs?

By Dr Richard Stevens, GP and Chairman of the Primary Care Society for Gastroenterology

The new NICE dyspepsia guidelines¹ are set to radically change the way dyspepsia is viewed and treated. This long-awaited document will have a significant impact on all involved in the treatment of sufferers – pharmacists, GPs and specialists alike. From a solid, evidence-based approach the full document runs to over 200 pages and is an academically rigorous review of the literature.

A summary of the main themes:

- No attempt is made to distinguish reflux from dyspeptic symptoms
- All patients with alarm symptoms need prompt attention
- For all other patients dyspepsia is a largely benign condition that can relapse and remit
- Routine endoscopy is not helpful and is unnecessary
- Self-management of symptoms with OTC drugs is encouraged.
- On demand use of the lowest effective dose of PPI may be appropriate to manage symptoms that persistently affect quality of life.

For the first time, a guideline for primary care management encompasses the pharmacy

management of dyspepsia and the first algorithm of the quick reference guide covers the community aspects of dyspepsia care. In essence this suggests that patients with alarm symptoms, who are taking drugs associated with dyspepsia or have inadequate relief with OTC medicines should be referred to the GP. All others should have continuing care with medicines from their pharmacy.

This endorsement of self-care with OTC drugs continues in the GP management algorithm. With the usual exception of patients with alarm symptoms, the ideal end point of this part of the guidance is "Return to self-care". This endorses the idea that dyspepsia can, and indeed should, be managed without investigation and by using the most appropriate OTC agents needed to control their particular symptoms.

Pharmacists are set to play a pivotal role under these guidelines. It is fortunate that this coincides with the POM to P switch of omeprazole and this agent will now be able to be widely used by recurrent dyspepsia sufferers to control their symptoms.

This is the first article in a six-week series, sponsored by Zanol[®]

NEXT WEEK

Noel Wicks discusses how pharmacists can get their staff involved in recommending omeprazole and capitalise on this opportunity

omeprazole

Zanol is for the relief of reflux-like symptoms (eg heartburn). Further information is available from GlaxoSmithKline Consumer Healthcare, Brentford, Middlesex TW8 9GS. Legal Status: P. ZANPROL is a registered trade mark of the GlaxoSmithKline group of companies.

Belfield and Colin-Thomès: strategic partnerships needed

remains true if case management is introduced for these patients, said Jennifer Dixon, from the King's Fund. Where the Kaiser Permanente model used in the US works so well is in identifying patients before they reach this high maintenance level, she said. Managed care organisations such as Kaiser Permanente are "sustained, systematic and serious about chronic disease management". This is something the NHS could do, she said, but: "PCTs have to think about incentives. Practice-led commissioning is very timely." Payment by results will create peer pressure between clinical staff to do a better job, she said.

the pharmacists on the medicines team "come into their own in chronic disease management", she added. Halton is adopting a "community matron" approach – advanced nurses with a defined caseload, working within a multidisciplinary team to deliver clinical and performance targets.

Pharmacists could also be used to take blood, coordinate results and support patients in monitoring and managing their results, said Steve Henderson.

Sue Roberts, DoH national clinical director for diabetes, spoke of how "patients with long-term conditions challenge everyone to work differently". Self-management is important and it

requires knowledge, skills and the right attitude, she said, of which the NHS is good at providing knowledge. The Expert Patient Programme and some peer support groups works better for

"PCTs have to think about incentives. Practice-led commissioning is very timely"

developing disease-specific skills and positive attitudes to disease, she said and detailed a programme designed for type 2 diabetes patients: DESMOND (diabetes education and self management for ongoing and newly diagnosed).

Developing self-management for patients helps individuals to not move up the care plan pyramid she explained.

The Expert Patient Programme empowers patients by moving away from the NHS's traditional 'save and rescue' model, which leaves patients less able to self-manage, said EPP principal trainer Jim Phillips. Using EPP is also linked to trends of increasing use of pharmacists and decreasing visits to A&E and GPs, patients being better prepared for consultations and improvements in coping skills and depression.

For more information:

www.hsj.co.uk

The Kaiser model was summarised by Northampton PCT too. Chief executive Mary Burrows revealed the PCT discovered people from nursing and care homes accounted for

55 per cent of admissions for the over 60s. This highlighted an area of poor GP coverage for these patients and an area to focus on. Northampton PCT will adopt a new model of care in the future and Ms Burrows hinted this might be abolition of out-patient departments and establishing community-based "consulting rooms for generalists and specialists supported by diagnostics and other social and community services".

Another US managed care model, Evercare, was considered by Halton PCT. This uses existing patient data to build up a patient profile which can be used for prioritising cases based on risk. Pharmacists are involved in managing patients, said the PCT's head of older people services, Janet Dunn. They are "enormously useful" when assigned to nurse caseloads and

Our question to pharmacists this week was: Will handing budgetary control to GPs be beneficial to pharmacies?

"I'm not sure – do they have the experience to do that?"

**Anon,
New Cross**

"No, they can't handle writing prescriptions, let alone budgets. They're not accountants or mathematicians."

**Anon,
Gerrards Cross**

"Yes, they need to devolve some services because they are overworked, and they are happy to do so."

**Sheelen Shah,
Waltham Cross**

Comment

from the Editor

The waiting is nearly over. The details of the new pharmacy contract in England and possibly Wales will be publicised in a couple of weeks via a series of roadshows as well as a structured guide.

The long wait has not helped with rumour control, especially after a rather public leaking of information last month. So the full details will ease some anxiety about how pharmacies will shape up under the new contract.

From the outset, PSNC has strived to make the funding distribution as equitable as possible. But there is currently a wide disparity between the extremes of 'dispensing factories' and those in the Essential Small Pharmacies Scheme, so be prepared for winners and losers under the new contract.

One concern is what will happen to those pharmacies with a small prescription volume. Will there be a threshold for a practice allowance, and what will it be? Could or should an 'exit package' to compensate contractors who go out of business be part of

the contract deal?

The independent sector may also have some broader concerns. While PSNC and the DoH have kept negotiations out of the public domain, the CCA has its representatives at PSNC meetings.

Some could say that this means the larger multiples will have been privy to the contract details for longer and will have been able to prepare their business plans accordingly. After all, knowledge is power.

But with the unknowns of the generics inquiry, the PPRS and the imminent consultation on skill mix and supervision, there are still many variables which could impact on the best made plans. And then there's the contractors' vote.

There are still many variables which could impact on the best made plans

Their views

Markos Kyprianou set out his aims last week

The European Commissioner designate on public health

Europe must succeed in the fight against obesity. I intend to promote policies that will lead to a healthier way of life based on an improved nutritional regime and more physical exercise.

European citizens merit full protection from smoking, especially in the workplace and other public spaces. I have been monitoring with interest the courageous political resolutions taken in Ireland and elsewhere, and I hope that by the end of my mandate all Europeans will enjoy a similar degree of protection. This effort will, of course, have to

be founded on dialogue and consensus on a national and European level.

I am particularly concerned over the issues of protecting young people from the dangers of irresponsible alcohol consumption and from addiction to smoking and in the drastic increase in cases of child obesity.

I will stridently promote the application of European best practice in the field of public health. I will struggle for: enhanced monitoring of epidemics, better co-operation between national health services,

protection of patient rights and more information.

I would like to guarantee a nutritional chain of high quality covering the whole of the internal market and which would be based not only on legislative regulations but also on strict and continuous monitoring. The Commission will continue to strive for high quality in national controls and will not hesitate to draw attention to deficiencies. Similar attention will have to be paid to monitoring the quality of imported foods, which should not evade compliance with the compulsory requirements.

BlackBAG

Advice may throw light on new contract

One late evening, after drink was taken, my brother took me out to a field overlaid by power cables right next to his house. "Watch this," he said holding up a fluorescent tube borrowed from the kitchen. It lit with a brilliance the envy of British Nuclear Fuels employees.

"Now tell me there is no danger from electro-magnetic radiation." Heading back, the bulb went out and we certainly learned the danger of a lack of electro-magnetic radiation by falling into a ditch full of cess pit overflow.

Point made. But a recent conference run by the DoH on reaching 'hard to access patients' gives some insight into perceived dangers. There is an inverse correlation between embarrassing conditions and the speed of presentation. As diseases get more conversational, not least from exposure in the media, importance rises beyond actual significance.

Young men, when asked the greatest killer of males in their age group – suicide or testicular cancer – invariably went for gosh goolie

What we need is a risk assessment program to allow people to seek advice on a genuine basis

genocide. In truth, fewer than 90 young men die each year from testicular cancer while around 5,000 will take their own lives.

For decades the medical profession had women compulsively examining their breasts on a useless hunt for abnormality. Later a breast aware campaign over-took the 'end of the world' approach. What we really need is a risk assessment program to allow people to seek advice on a genuine basis and who better to give such advice than the pharmacist?

Throwing light on a situation, with or without overhead power cables has to be the most common sense part of the new contract.

Dr Ian Banks is a GP practising in Northern Ireland

TOPICAL REFLECTIONS

Good ideas from the PPA

I was heartened to read that the PPA has come up with ways to make my payment systems easier (*C&D*, October 9, p10). A lot of the rules seem to have been invented simply to create extra work.

I would be delighted if endorsing requirements were reduced to exceptional cases or even banished completely. As a human being I will always miss the odd endorsement but, despite having done the important part of my job correctly, I am penalised for an administrative oversight.

Why, for example, do I always have to remember to claim a Controlled Drug dispensing fee? My CD

dispensing procedures are checked independently by the local Society inspector so they are always up to scratch. I should automatically be paid a CD fee for every script submitted, for this submission on its own is evidence that I have done the job correctly.

And abolishing Zero Discount List B would remove the need to have yet another piece of paper stuck to my dispensary wall to remind me of what odd selection of products need endorsing. It is so rare that discount is received on these products that surely endorsing when this happens makes more sense.

Boots needs to walk its talk

I'm glad that the Company Chemists' Association has, for once, put its head (or Digby Emson's head at least) above the parapet to speak to the whole profession at last week's UniChem convention. Mr Emson's frank and interesting presentation signified perhaps a realisation that both independents and multiples have something to gain from presenting a united front as pharmacy moves forward. I agree that "we will achieve much more together than apart".

It's therefore unfortunate that Mr Emson (until recently Boots' pharmacy superintendent) did not give his presentation to my local branch of Boots.

They seem intent on continuing their narrow minded practices for their own gain, often to my disadvantage and sometimes also to patients'. Despite my continued policy of 'nice and helpful' towards them, the staff at this branch continue to treat me as a second class citizen.

A local surgery sends most of its prescriptions to Boots or me for dispensing and collection. A clearly marked script is occasionally sent to the wrong pharmacy. While I always return Boots' scripts to them, they in turn dispense any they receive marked for me. So when my patients arrive, I waste time phoning around, then have to send them to the other end of the high street to Boots. This is hardly the united front we should be presenting.

Ice with your desmopressin, sir?

When is a desmopressin nasal spray not a fridge line? When it's the 50-dose Nocutil version apparently. The pharmaceutical reasons are beyond me but for practical purposes it must be confusing for more patients than just the one who visited my pharmacy the other day.

This patient had an open repeat prescription for desmopressin nasal spray that he had collected from a few different pharmacies in the past. I pointed out that the Nocutil I had dispensed was not a fridge line, because I was surprised myself. He replied that he had received both Nocutil and Desmospray in the past and he had been told that Nocutil need not be kept in the fridge. But just to be sure, and so as not to lose it, he always kept his nasal spray in the fridge. I managed to convince him that this would not be a good idea, but was unable to enlighten him as to the reason why one brand should be refrigerated and not the other.

Pfizer, quotas and pharmacy

Following a series of reports in *C&D* about the introduction into the UK by Pfizer of a quota system for pharmaceuticals, Olivier Brandicourt, managing director of Pfizer Ltd explains how and why the system was introduced

Regular readers of *C&D* will have noticed the interest raised by Pfizer's recent introduction of a UK quota system, designed to bring our UK supply process into line with the rest of Europe.

We have now contacted our major wholesalers to reassure them that the methodology by which we calculate their quotas is robust and flexible enough to cope with genuine fluctuations in domestic demand. We would also like to remind you, our pharmacy customers, that in the unlikely event of your first and second line wholesalers being unable to supply, you have only to call us on 01304 645262 to receive direct supply.

So why did we make the change? The scale of our business is such that we are now the largest supplier of medicines to most European health systems. It is therefore imperative that our supply operations work effectively, so that we can adequately meet demand in the countries in which we operate. Without a clear understanding of domestic demand in each country, and an equally clear understanding of the journey our medicines make from factory to patient, it is simply not possible to guarantee consistent supply.

Another important driver was the issue of patient safety, both in terms of the risk of counterfeits entering the legitimate supply chain, as evidenced by the recent Cialis and Reductil cases, and growing evidence of substandard, parallel imported medicines.

Sensitive, flexible supply management, such as the system we have in place across mainland Europe and now in the UK, is in our view the only way to discharge our responsibilities and deliver a safe, consistent supply of quality medicines to European patients and healthcare providers.

Aside from supply processes, what lies ahead for Pfizer and pharmacy? We are immensely excited by the partnership opportunities in store for the profession. We believe that Pfizer's

experience of working with other healthcare providers to introduce innovative disease management programmes

will allow us to support pharmacy as it moves into a new era of improving healthcare delivery to patients in the community.

As we are all aware, under-treatment, poor compliance and lack of ongoing counselling and support can currently undermine investment in health promotion and disease prevention. Pharmacy

Olivier Brandicourt: Pfizer's method of calculating wholesalers' quotas is "robust and flexible"

"It is imperative that our supply operations work effectively"

is uniquely placed to fill this gap, due to the profession's ability to address the concerns of patients in their own terms, to follow and monitor their progress and to alert the rest of the healthcare team to evidence of non-compliance or deterioration.

We are aware that pharmacy will not be short of friends wishing to work in partnership as this new era dawns. However, just as pharmacy has a unique role to play in helping to transform the NHS from a sickness service to a health service, we believe that we too are uniquely placed to offer support. Pfizer now

has expertise in a broader range of diseases than any other research-based pharmaceutical company, and the experience to work alongside pharmacists to translate this knowledge into tangible programmes.

It goes without saying that we do not have all the answers to the new challenges facing the profession. However, we are committed to listening to the needs of community pharmacy and to working with members of the profession at all levels to support the unprecedented changes that lie ahead.

A simple way to cut through congestion

The new Galsud decongestant range makes it easy for you to select the right product for effective nasal decongestion. So your customers can start to feel the relief ...fast.

Pharmacist tells of dispensing error and string of driving offences

A pharmacist convicted of a string of motoring offences went on to make a "significant" dispensing error that led to an elderly woman spending more than a week in a hospital.

However, the Royal Pharmaceutical Society's Statutory Committee has deferred making a judgement for a year in a hearing involving Rajiv Sarna of Windlesham, Surrey.

At the hearing last month, the Committee was told that Mr Sarna had handed out a diuretic, bumetanide, rather than an anti-angina drug, bisoprolol, on May 2 last year at his pharmacy in Basingstoke.

The pharmacist faced allegations of misconduct on the basis of the error, failing to give the woman's relatives an adequate explanation of the mistake, and his motoring convictions.

David Bradley, for the Society, told the Committee that the

pharmacist accepted he was responsible for the error and for failing to respond to a request from the woman's family as to what had occurred.

He said after several days of taking the incorrect drug, on May 12 the patient "suffered a severe angina attack and was violently sick. She was admitted to the Basingstoke Hospital, ultimately to be discharged on May 21 having spent time in the High Dependency Coronary Care Unit".

Although the woman's daughters contacted Mr Sarna, it was not until August 25 when he wrote with a full explanation of what had occurred, explaining to them the steps he had taken to make sure such an event could not happen again.

However the letter written on August 25 was, for some reason, not delivered with the result that the patient's family faced a further

wait before they received an explanation.

Mr Sarna told the Committee he was "very sorry about the whole thing. I'm very remorseful," adding that his Basingstoke premises had undergone a new refit as a result of which his dispensary has been reorganised.

He thought the error occurred when he might have been distracted and "inadvertently picked up" the wrong drug.

Since the error occurred he has introduced procedures so that whoever dispenses a bag full of medicines signs off for it.

He explained that he had been away for some weeks in July and this, combined with his investigation as to what had occurred, had caused the delay, which he "absolutely and wholeheartedly" regretted.

He could offer "no explanation at all" as to why the August letter was not received by the patient's family.

Mr Sarna then went on to explain how "thoroughly ashamed" he was at his motoring offences which involved excessive alcohol. However, since those convictions he had changed his lifestyle as they had served as a "wake-up call" for him.

The pharmacist was first convicted at Woking Magistrates Court in June 2000 of driving a motor vehicle after consuming excess alcohol.

He was also convicted on the same date of having been the driver of a vehicle in which an accident occurred causing injury to a security guard.

For these offences, Mr Sarna was fined £1,800 for the driving offence and £865 for causing injury. He was also ordered to pay £750 costs and to pay £200 compensation.

He was disqualified from driving for two years, which came into force a year later due to a failed appeal.

On the second occasion in July 2001 at Watford Magistrates Court, he was convicted of driving a motor vehicle on the A41 by-pass in Berkhamstead having consumed excess alcohol.

For this offence he was fined £800, ordered to pay costs of £69 and disqualified for three years.

On the third occasion, in April 2003, at Woking Magistrates Court Mr Sarna was convicted of driving a motor vehicle while disqualified from holding a driving licence and using a car without insurance.

For driving whilst disqualified he was given a community punishment order for 100 hours, ordered to pay costs of £55 and disqualified from holding a driving licence for a year.

The pharmacist's lawyer, Edward Henry, reminded the Committee that no causal connection was found between his client's motoring offences and the dispensing error.

"The error was not associated with impairment due to alcohol abuse."

Mr Henry also told the Committee of the various projects that his client was involved with including the building of a new one-stop health centre in South Ascot.

Mr Sarna is also heavily involved in local projects to help enhance services such as rehabilitation of drug users, helping patients stop smoking and monitoring blood pressure and cholesterol levels in other patients.

Committee chairman Lord Fraser of Carmyllie QC said, after deliberating, he and his colleagues had found that there was "a significant error in which an old lady suffered serious angina and was taken to hospital for nine to ten days".

Although it took into account not only the dispensing error but also his motoring offences the Committee "remained puzzled".

This was because "the consumption of alcohol by him does not appear to have affected his career as a pharmacist. There was no suggestion that consumption of alcohol caused him to make this dispensing error".

However, the opinion of a counsellor used to dealing with professionals with drink problems that Mr Sarna's relationship with alcohol was problematic although he too concluded that his drinking had not caused the error.

"In the circumstances we have no option now but to postpone a decision for a year," said Lord Fraser.

NEW

HIGH STRENGTH Vegetarian GlucOsamine

Ahead of the field... Naturally

Until now there has never been a vegetarian form of glucosamine available in the UK, so now everyone can help to maintain mobility of their joints by supplementing their diet with High Strength Vegetarian GlucOsamine from Health Perception, a convenient and readily absorbed form of glucosamine HCL formulated with Manganese

High Strength Vegetarian GlucOsamine is sourced from a naturally occurring corn base that undergoes a patented fermentation process. It is non-shell fish and non-animal derived and has been given the seal of approval from the Vegetarian Society

High Strength Vegetarian GlucOsamine is available in packs of 30, 60 and 90 tablets and is available to order from us directly or alternatively from your wholesaler, so stock up now!

High visibility

In the sixth and last article of our series *Helen Newman* of the RNIB discusses making your business usable for the visually impaired

Photo: RNIB

Ensuring that your business meets the needs of more than two million blind and partially sighted people in the UK should surely be a matter of customer service rather than an exercise in complying with the Disability Discrimination Act.

More than 90 per cent of blind and partially sighted people are over the age of 60 and are more likely to be prescribed medication than younger people.

The Disability Discrimination Act (DDA) became law in 1995. Since October 1999 a number of its provisions have been implemented conferring on service providers an obligation to make sure their services are accessible to disabled people.

These provisions cover:

- **Changes to practice, policy and procedure.** This might mean that instead of requiring a driving licence as a form of identification when getting a prescription, you allow those – like visually impaired people – who don't hold such ID, to use another means of proving their identity.
- **Provision of auxiliary aids and services.** This could include providing direct assistance to blind and partially sighted people using your store, explaining or describing which products in a particular range are available, or making general information that your shop provides to all customers available in formats that blind and partially sighted people can use such as large print, audio tapes or Braille.

Ensuring your staff feel confident and relaxed with customers with disabilities can significantly affect the way customers are treated

- Making services accessible by other means.
- Making buildings in which services are provided more accessible. This might include reviewing your in-store signage to ensure that there is maximum colour contrast between the text and the background.

Comprehensive advice about your obligations under the DDA can be obtained from the Disability Rights Commission. The information provided in this article highlights areas of good customer service rather than just the measures or steps that you might need to take to comply with the DDA.

What you can do

One of the most important things you can do is to ensure your staff are able to offer the level of good customer service that both you and your customers expect to be delivered. Ensuring your staff feel confident and relaxed with customers with disabilities can significantly affect the way customers are treated and the service they receive.

Sometimes addressing simple things such as how best to guide blind and partially sighted customers or how to approach people in order to offer help can make a big difference in how prepared your staff feel and how comfortable disabled people feel in asking for assistance.

Consider offering staff training; develop protocols covering the way in which customer concerns and problems will be dealt with; inform customers that your staff really are there to help them.

Access to all kinds of information is a real problem for blind and partially sighted people. Not being able to read information provided to them in pharmacies can, obviously, have serious consequences. There are a number of ways in which you can make sure that the information about medicines or products that you provide is accessible.

It is a widely held misconception that blind people can see nothing at all. Many visually impaired people have some sight and are able to read print if it is large enough and if a plain font is used. Producing large print and audio tape versions of the leaflets you provide to customers needn't be difficult or costly.

Increasing the font size of the text you use is simple. RNIB recommends the minimum font size for standard print should be 14 point and the minimum for large print should be 16 point. If you are able to adjust the size of the print on the labels that you produce why not ask your customers how large they need the font and tailor it to meet their needs?

If you know a customer has a serious sight problem why not offer to read out the patient information leaflet, particularly if the information is provided in small print?

In addition to addressing the way you and your staff engage with disabled customers and the services you offer, you should also give some thought to the environment in which you provide these services.

Signage and orientation around your store can determine how confident blind and partially sighted people feel on your premises. Ensure signage uses clear print, good colour contrast between background and text and that it is at an appropriate height.

Store layout, or more specifically, the fact that last week the baked beans in your local supermarket were in the first aisle and this week the aisle is full of Christmas cards and wrapping paper annoys us all. Rotating the location of products in-store may make commercial sense, but for visually impaired people it can mean that they can't actually find the things that they want to buy. ☹

Further advice on the Disability Discrimination Act can be obtained from the Disability Rights Commission on 08457 622633.

RNIB is able to provide advice on all of the areas discussed here. Please feel free to contact Stobonne Bremser or Nicky Finney on 01733 375345 or busdev@rnib.org.uk.

Live life. The way you want.

It was my wife who suggested that, after two years of retirement following the sale of my business, perhaps I ought to do something more useful than spend endless days playing golf and mowing the lawn. "How about trying a bit of locum work", she said. "You are always being asked". So next time I was asked to cover a Saturday morning I agreed. One thing led to another and I now find I have worked for all the major pharmacy groups except Boots and Safeway, and could work seven days a week, such is the shortage of pharmacists in my neck of the woods.

This has, in turn, meant I've gained a pretty varied but accurate picture of retail pharmacy in the area, and I have to say it's not a pretty one. I went into my locum duties with an open mind but as the months went by, the realisation dawned that what I at first

A returning **locum's** view

David Morgan sold his business a couple of years ago to retire. Asked back to locum, he gained an insight into how some of his former competitors ran theirs

considered to be the situation in an unrepresentative minority of pharmacies was actually very much the norm.

Not to put too fine a point upon it, I have to declare that much of retail pharmacy, as I have witnessed it at first hand, is an absolute shambles and reflects no credit on the profession, pharmacists or executives of many of the larger groups.

Indeed, I have been appalled at the way some of the major companies run their pharmacies. I had always imagined, when in business, that my larger competitors were much more efficient than myself – ran a tighter ship, bought more economically and generally looked after their staff in some unspecified paternal way much better than I was ever able to do.

However, far too frequently I found minimal manning levels and harassed staff who were under-paid, under-appreciated, over-worked and with their morale virtually at rock bottom. Premises were cluttered with unsold stock, there were minimal staff facilities, dirt and dust everywhere, returned medicines spilling all over the place and paperwork and invoices dumped anywhere.

Lack of the appropriate numbers of staff to conduct the business was the norm and frequently I would be dispensing up to 300 prescriptions a day with no dispensing assistance whatsoever – sometimes due to staff on leave, but usually just because there was no one to assist.

Dispensing assistants were often viewed as an unnecessary luxury, but where there was an experienced dispenser, the difference they

made to the efficient running was enormous.

Frequently the branch would have no permanent manager but would live off a constant stream of locums of varying personality and ability, frequently arriving late – sometimes very late, after travelling huge distances.

Generally the staff did not know who the locum was until he or she turned up. Often on arrival they took time to familiarise themselves with the computer system, faced a huge pile of scripts, impatient customers waiting for their medicines and, of course, had to find their way around the dispensaries, many of which were organised by the last manager in a manner guaranteed to produce the utmost confusion and delay to any stranger.

However, complaints about inadequate locums spending too much time on their

mobile phones and not pulling their weight were legion.

It always completely amazed me that the executive responsible for booking locums on an area basis would frequently employ an expensive agency locum who often travelled a vast distance and sometimes stayed at a local hotel if booked

for several days, when a local locum was available living less than 20 minutes away.

No one ever appeared to monitor their performance in booking locums – doubtless to the delight of the agencies. But their inefficiencies are costing the main companies an absolute fortune in unnecessary agency locum fees. These people seemed not to care a scrap so long as the locum vacancy was

covered, and no one in the organisation ever appeared to query why locum bills are so high.

Enormous economies were there to be made if only someone bothered to investigate the situation. And why not ask a locum to work more often at fewer branches so they get to know the staff, customers and doctors better, rather than shunting them around, often on an ad-hoc, unplanned basis?

In many pharmacies there would be a long-serving senior assistant who ran the branch as the manager, grossly underpaid for the truly monstrous burden they carried. Without them the branch would effectively collapse as a coherent unit and I have the most enormous admiration for their dedication and hard work – often performed under the most impossible conditions and usually for not much more than £6 per hour, the same as any other member of staff.

Stress levels were enormous amongst many dedicated staff who invariably felt their efforts were unappreciated and certainly unrewarded. Unrealistic targets for turnover and prescription numbers were constantly being set and dangled before staff like carrots before a donkey. If occasionally achieved there would be little credit given for the hard work.

If pharmacy is to adopt, let alone fulfil, the extended role being laid out for it in the future NHS, it has much hard work to do at local level before it can even begin to fulfil the dreams of the Society and the NPA, let alone the wishes of the Treasury and our political masters. ☹

Is this a fair opinion? In your experience, are conditions better than those described above? Or do you agree with David Morgan's overview? Let us know. Write to us at C&D, Sovereign House, Sovereign Way, Tonbridge, Kent TN9 1RW, e-mail on chemdrug@cmppinformation.com or fax to 01732 367065

2 better

(Trust UniChem to deliver P and GSL lines twice daily)

Your customers rely on you to get their medication to them on time. And when it comes to buying products, they expect great choice and value.

Fortunately you can trust UniChem to deliver on both counts.

With deliveries twice a day, including single items, UniChem goes further to make sure you and your customers get everything you need when you need it.

We can also deliver expert category advice – so you get the most out of your retail space and your customers get the products they're looking for.

All of which makes us, we believe, at least **two times better**.

Please see your UniChem Account Manager or call 0208 391 7071 for more information.

Prescribing Information: Unguentum M is an ambiphilic topical preparation with emollient properties, which contains the high lipid content of an ointment but also has the water miscible characteristics of a cream. Contains: Purified water, white soft paraffin, cetostearyl alcohol, polysorbate 40, propylene glycol, glycerol monostearate 40-55, liquid paraffin, medium-chain triglycerides, sorbic acid, colloidal anhydrous silica,

sodium hydroxide. Uses: Unguentum M has emollient properties and is recommended for the symptomatic treatment of dermatitis, nappy rash, ichthyosis, eczema, protection of raw and abraded skin areas, pruritus and related skin conditions where dry scaly skin is a problem, and as a pre-bathing emollient for dry/eczematous skin, to alleviate drying effects. It is also used as a diluent for various topical corticosteroid formulations where a

lower strength preparation is required and as a general base for extemporaneous dispensing. Dosage and administration: A thin application of cream should be gently massaged into the skin three times daily or at appropriate intervals. When used as a protective cream Unguentum M should be applied sparingly to the affected areas of the skin before, or immediately after, exposure to a potentially harmful factor. Contra-

indications, warnings etc: Unguentum M should not be used in patients sensitive to any of the ingredients. Undesirable effects: None known. Package quantities: 50g and 100g tubes, 500g tub and 200ml pump pack. Basic NHS cost: 50g £1.59, 100g £3.13, 500g £9.55, 200ml £6.19. Legal category: GSL. Product licence number: PL 00327/0115. Product licence holder: Crookes Healthcare Ltd, Nottingham NG2 3AA.

Uncompromising

Rubbing in thick emollient ointment is time consuming and dry, scaly skin needs moisturising nourishment fast.

So we made Unguentum M ambiphilic which means it has the high lipid content of an ointment combined with the water miscible characteristics of a cream.

We do not compromise on application; Unguentum M glides smoothly onto skin for easy absorption and relief from the symptoms of eczema, dermatitis and other irritating skin conditions.

Unguentum M. Works like an ointment, feels like a cream.

There has been much publicity over the lack of suitably licensed medicines for children.

Sharon Conroy describes how to make the best of what's available

THE COLLEGE OF PHARMACY PRACTICE

This course (module 1318), in association with multiple choice questions being published in *C&D* November 6, provides one hour's continuing education

To have a safe and effective input into medicines use in children, pharmacists need some understanding of the variable and dynamic changes in drug handling and response from birth to adulthood. Drug administration to children brings many challenges, which pharmacists must appreciate in order to be competent and confident in the pharmaceutical care of paediatric patients and their families.

Children are not just small adults but a heterogeneous population ranging from preterm babies to 18-year-old adolescents, weighing anything from 500g to 100kg plus. They suffer from many of the diseases that adults do, such as cardiac, respiratory, renal and other system diseases, as well as many paediatric-specific disorders.

Only recently has there been international agreement on age groups to be used when considering drugs for children.¹ Preterm newborn infants are those born at under 37 weeks gestation; neonates from 0–27 days; infants and toddlers from 28 days to 23 months; children from two to 11 years and adolescents from 12 to 16–18 years (dependent on region – consensus was never obtained on this part of the classification). This structured approach to age grouping is aimed at the pharmaceutical industry to rationalise how drugs and their dose recommendations are licensed for children. This is to avoid product licences having recommendations based on age bands, which currently seem to be arbitrarily chosen, rather than being based on relevant

physiological and pharmacokinetic principles. For example, amoxicillin is licensed in doses of 125mg eight-hourly from age 0–10 years and 250mg thereafter; 0–10 years would appear a huge range for which the same dose is appropriate!

Flucloxacillin, however, is licensed in doses of 62.5mg six-hourly under two years, 125mg six-hourly for two to 10 years, and 250mg thereafter. There is no consistency on age ranges currently chosen for licensing purposes and no apparent logic applied.

The different stages of a child's development are accompanied by altered pharmacokinetics, which must be considered when choosing drugs and their doses.

Absorption

At birth gastric pH is 6–8. Apart from a brief drop in the first few hours of life, it remains relatively high until gradually falling to the acidic adult levels by two to three years of age. This can lead to increased absorption of acid-labile drugs, such as penicillin, because of reduced breakdown. Reduced peristalsis, slowed gastric emptying, reduced production of bile, vomiting and spitting out of medicines in young children all add to variability and unreliability of oral drug absorption. Despite this, many drugs may successfully be given orally to babies tolerating milk feeds.

Muscle mass is low in babies, and blood flow through the muscle is reduced and variable. Absorption from intramuscular

To understand the physiological and pharmacokinetic differences between children and adults

To know how children's doses are calculated

To be aware of issues resulting from the lack of suitable licensed formulations for children

To be aware of medicines which should not be dispensed for a child

To be aware of the problems of using adult medicines for child's doses

Children are a heterogeneous population ranging from preterm babies to 18-year-old adolescents

sites is therefore unpredictable. Furthermore, the IM route is painful and should be avoided in children if possible.

Increased systemic absorption of topical substances is possible in neonates and infants with their large surface area relative to body weight and more hydrated skin.

Toxicity has occurred as a consequence – for example, neurotoxicity and death following hexachlorophane absorption from dusting of umbilical stumps with hexachlorophane powder. Adrenal suppression has resulted from inappropriate use of topical corticosteroids. Care must be taken when choosing topical products for these patients.

Distribution

Total body water as shown in

Figure 1 gradually decreases through childhood to adult levels. Extracellular water follows a similar pattern and results in significantly increased volumes of distribution for drugs distributed extensively into extracellular water, particularly in neonates and young infants. For example, the volume of distribution of gentamicin is 0.35–0.78 l/kg in the neonate, compared with 0.2 l/kg in adults.² Relatively larger doses per kg/bodyweight are therefore necessary to provide therapeutic serum concentrations in the young.

Plasma protein concentration, binding affinity and capacity is reduced in the neonate.

Continued on page 26 ►

◀ Continued from page 25

Competition for binding sites by endogenous compounds such as bilirubin may occur. Highly protein-bound drugs, such as phenytoin, furosemide and indometacin, show increased volumes of distribution and levels of free drug.

Many metabolic liver enzyme processes are immature in infants. Pathways mature at different rates. For example, in older children and adults paracetamol is metabolised mainly by glucuronidation. In the neonate it is metabolised by sulphation as this alternative pathway is more advanced at birth. Glucuronidation is not significant at birth and takes several months to become fully mature.

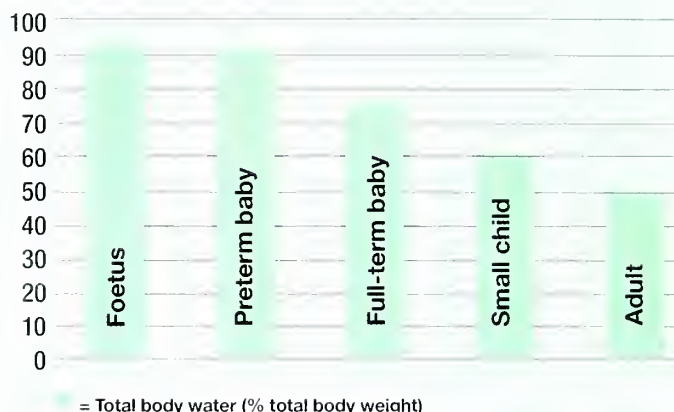

Theophylline is also metabolised by a different pathway in newborn babies, resulting in the production of caffeine rather than methyl uric acids as in older children and adults. Caffeine is also active, so a lower theophylline dose is needed. Theophylline clearance from one to nine years of age exceeds values of either young infants or adults, hence much larger doses per kg and shorter dosing intervals are required because of shorter half-lives. This is thought to be due to the relatively large size of the liver.

Renal excretion depends on glomerular filtration and tubular secretion. Both are much reduced in babies up to around a year of age compared with adults. Consequently, clearance of renally excreted drugs is prolonged, particularly in preterm babies in the first week of life. Extended dose intervals are required for some drugs – for example, flucloxacillin is recommended 12-hourly in neonates under seven days old; eight-hourly at seven to 21 days; and six-hourly thereafter.³

The above parameters must be taken into consideration when choosing drugs and doses.

Using body surface area is the most accurate method of dose calculation as this reflects cardiac output, fluid requirements, liver and renal blood flow and glomerular filtration rate better than weight-based dosing. But, in practice, it tends to be used only for a limited number of drugs,

Figure 1: Total body water changes with age

= Total body water (% total body weight)

such as cytotoxic agents. Surface area can increase by 1–2 per cent daily in a young child, so doses require frequent adjustment. Surface area estimations from height/weight nomograms can be problematic as height is difficult to measure accurately, especially in small children and babies. Very few published dose recommendations are surface area-based, therefore this method is impractical for many drugs.

Weight-based doses are mainly used, particularly in hospitals. Age-banded doses are used for drugs with a wide therapeutic index.

To ensure that the most evidence-based doses are chosen, a reputable paediatric dose reference source should be used. In the UK, *Medicines for Children* is highly recommended.³ This is a unique collaboration between paediatric pharmacists and medical staff, published by the Neonatal and Paediatric Pharmacists Group (NPPG) and the Royal College of Paediatrics and Child Health (RCPCH). It contains guidelines for the management of common paediatric diseases and monographs of drug doses, administration and licence information. It is peer-reviewed and accepted as the UK national paediatric drug reference source. The Department of Health has

recently committed to distributing a new version of this book, the *British National Formulary for Children*, to GPs, pharmacies and nurses in the same way as the current *BNF*.

Many medicines we need to use for children are not licensed in the indications, age ranges, doses and routes required. Manufacturers write disclaimers stating that their products should not be used in children at all, or limit their recommendations to specific age groups, indications or routes of administration.

This has led to the need to use unlicensed drugs, or drug-use outside the licence restrictions (off-label). Ninety per cent of babies in neonatal intensive care, 70 per cent of patients in paediatric intensive care, 67 per cent of children in hospital in Europe, and 11 per cent of children in the community in the UK

receive at least one unlicensed or off-label drug.^{4,5,6,7} These medicines have not been subjected to the licensing process at all (unlicensed medicines) or in the situations where they are used (off-label medicines), so safety, efficacy and quality cannot be assured. This does not reflect inappropriate prescribing, but the lack of availability of suitable,

licensed medicines for children.

A few drugs are not recommended in children because of potentially serious problems – for example, aspirin and its association with Reye's syndrome. Aspirin should not be given to patients under 16 years other than with careful medical supervision for specific conditions, such as its anti-platelet effects in certain cardiac disorders.

For most drugs, though, the only reason they are not licensed for children is because clinical trials to provide the required evidence have not been conducted. Admittedly, ethical, practical and technical issues surrounding clinical trials in children make them more difficult and time-consuming than in adults.^{8,9} But the additional time and expense to the manufacturer balanced against the commercial benefit of licensing a drug in the relatively small paediatric market tends to be the most common real reason.

Proposed EU legislative changes may change this in the future. This will require pharmaceutical companies to study appropriate drugs in children, and an incentive of patent extension should compensate for the additional expense. Similar legislation and incentives have shown success in the US.

Everyday issues

Problems for the pharmacist following this lack of suitable licensed formulations include the need to prepare extemporaneous formulations to deliver the child's dose in a form that the child can take, or buy such medicines from a specials manufacturer. This must often be done with little information to support the drug's bioavailability and the preparation's physical, chemical and microbial stability.¹⁰ The resulting preparation is often unpleasant to take, with a short shelf-life obliging the family repeatedly to obtain further supplies.

Communication between hospital and community pharmacists regarding such products is essential to ensure seamless care. Many licensed paediatric medicines are available in other countries but not the UK (and vice versa). Importing licensed formulations from other countries may therefore be a preferable alternative.¹⁰

However, difficulties around importation or free movement of medicines between countries can make this complicated and expensive, and gaining access to

Factors affecting dose calculation include height, weight and body surface area

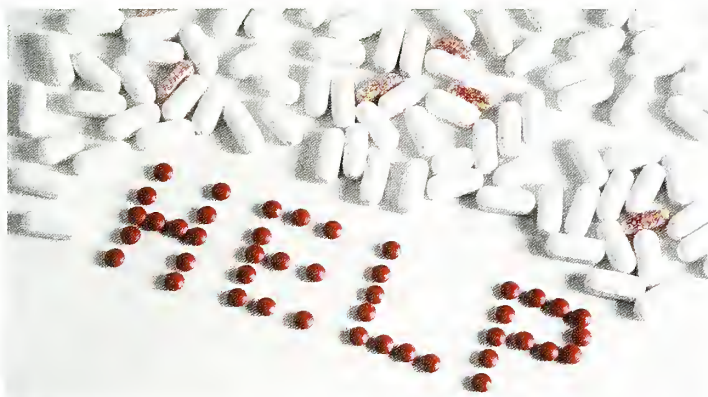

information on product availability is not always easy.

Other means must sometimes be employed to overcome the lack of suitable products. It may be necessary to use injections orally. This must be done carefully as different formulations may include different bioavailability and stability. Tablet cutters may be used to halve or quarter tablets, although this is inaccurate and dose equivalence is unlikely to be achieved. Soluble tablets can be used if available. Doses less than a full tablet may be made up by dissolving or dispersing a tablet in a specified volume and administering an aliquot of the resulting liquid with an oral syringe.

Some tablets are soluble or dispersible even if not marketed as such; a list of such tablets may be available from your local hospital pharmacy. Unfortunately there is a lack of research to confirm the drug contents of aliquots of liquids when doses are measured in this way. For many drugs it is not known whether the drug disperses uniformly throughout the suspension produced, so precise doses may not be guaranteed.

Awareness of inappropriate excipients in some medicine formulations (even some licensed for children) is important. Examples are the BP formulation of Phenobarbital Elixir, which contains 38 per cent alcohol and should not be dispensed for a child. Phenobarbital injection contains 80-90 per cent propylene glycol that can cause hypersensitivity if the injection is not diluted appropriately.

Patient information leaflets (PILs) reflect the information in the licence. If a drug is being used off-label then the PIL may contain information to concern a parent/carer. Counselling by the doctor or pharmacist should allay fears, but many doctors and pharmacists are unaware when the prescriptions they write or dispense are off-label. One option has been to produce a generic PIL, explaining why it is necessary to use unlicensed and

Medicines for children is a field presenting many challenges and rewards

off-label medicines. This information, produced by the NPPG and the RCPCH, is available from www.rcpch.ac.uk/publications/formulary_medicines.html.

However, this does not replace product-specific information produced in an appropriate format for children and their families. Efforts are being made to address this gap.

The paediatric patient suffers many of the diseases that adults suffer as well as other diseases peculiar to children. The altered and ever-changing pharmacokinetics from birth to adolescence, the need for individualised dose calculation and the lack of suitable licensed formulations offer many challenges. They also offer many rewards by allowing pharmacists to use all their skills and imagination on a daily basis and to be an essential member of the multidisciplinary team.

Action plan

1 The article draws attention to the fact that a single recommended (licensed) dose is considered by the licensing authority to be suitable for a large range of children. Do you find the same is true of adult medicines? In spite of this small dose range for widely varying patient parameters, medicines appear to be effective and safe. Why?

2 How often do you have to prepare a formulation for a child? Record such preparations in your practice workbook. Have you thought about whether these medicines are safe and/or effective? Make notes against each entry about these safety/efficacy factors. What are the risks?

3 How do you estimate the shelf life of an extemporaneous preparation you dispense? Look in your extemporaneous preparation log book. Are there examples that raise questions?

4 Do you think some OTC products are safe for children if sold outside their licences? Do you sell such medicines to parents? You may suspect the sale is outside the licence but decide to ignore the implications. How serious is this in terms of your professional credibility compared with the benefits to the patient?

5 Write notes in your practice workbook about what you need to consider before making an extemporaneous preparation that has no product licence, cutting tablets or dissolving soluble/dispersible tablets in a suitable vehicle.

6 Compare the changes in drug handling in children with the changes that occur in the elderly (see *C&D Pharmacy Update*, August 21). Is there any common ground?

Distance learning for pharmacists

Pharmacists using **Pharmacy Update** for continuing education are reminded of the need to test. With the support of Genus Pharmaceuticals, C&D's readers can self-test their progress by using the multiple choice question (MCQ) paper to be inserted in the November 6 issue, which will cover this week's CPP-accredited module, together with those in the October 9 and 23 issues. Those will cover:

- Respiratory viruses (1317)
- Children's medicines (1318)
- Vitamin D (1319).

A telephone marking service offers independent verification of results – details on the monthly MCQ papers. People wanting to register for Pharmacy Update can contact Mary Prebble on 01732 377269.

GENUS PHARMACEUTICALS

Statins do not inhibit clopidogrel

Statins do not inhibit the antiplatelet action of clopidogrel, although some earlier analyses have suggested an interaction, claim North American researchers.

The Interaction study investigated 75 patients taking either atorvastatin, any other statin or no statin while they were also taking aspirin 325mg daily

and clopidogrel 300mg prior to coronary artery stent implantation.

The researchers found that there were no significant differences on patients' platelet characteristics four and 24 hours after taking clopidogrel. However, patients receiving statins did show lower collagen-induced aggregation 24 hours after taking

clopidogrel and a reduced expression of protease-activated thrombin receptor (PAR-1).

Statins do not inhibit clopidogrel's antiplatelet activity, conclude the researchers. However, statins may directly inhibit platelets through an unknown pathway, which, they suggest, could be related to regulation of PAR-1.

Ramadan and Diwali medicines advice issued

Servier Laboratories has produced a book to help healthcare professionals advise type 2 diabetes patients who will observe fasting for Ramadan and feasting for Diwali.

Focus on Fasting and Feasting has information on working with patients to help them control their diabetes during festivals which affect diet. Patient leaflets are

available in Bengali, Gujarati, Hindi, Punjabi and Urdu and are free to healthcare professionals along with posters and a key festival calendar.

Diabetes UK has welcomed the pack and its role in patient education and awareness.

Topical diclofenac

Topical diclofenac can improve pain and stiffness in patients with primary osteoarthritis of the knee, say US researchers.

Patients who used diclofenac sodium solution, with absorption enhancer (dimethyl sulphoxide) reported a 45.7 per cent reduction in their rating of knee pain.

For more information:

Arch Int Med 2004; 164:2017-23

Scriptlines

Keppra additions

UCB Pharma has launched Keppra (levetiracetam) tablets 750mg and oral solution 100mg/ml.

The tablets are available in packs of 60 and the oral solution as a 300ml bottle. The oral solution should be diluted in a glass of water and may be taken with or without food. A graduated oral syringe and instructions are included. The initial adult dose of levetiracetam is 500mg twice daily.

For more information:

See Price List supplement
<http://emc.medicines.org.uk>

Zyprexa IM

Lilly has written to health care professionals as a reminder of the recommended use of Zyprexa Intramuscular in view of reported serious adverse events.

Zyprexa Intramuscular should be used to control agitation and disturbed behaviours rapidly when oral therapy is inappropriate. The maximum combined dose of oral and intramuscular Zyprexa therapy is 40mg.

A total of 49 adverse events, including eight fatalities, had been reported by the end of August

2004. Lilly says the proportion of fatal adverse events reported for Zyprexa Intramuscular appears similar to that reported for other parentally administered antipsychotic drugs.

For more information:

Lilly Medical Information
Tel: 01256 315999

Raptiva

Serono has launched Raptiva (efalizumab) 100mg/ml powder and solvent for injection.

Efalizumab is a recombinant humanised monoclonal antibody for treating moderate to severe psoriasis in patients who have failed to respond to treatments including ciclosporin, methotrexate and PUVA. It should be prescribed only by dermatology specialists.

The initial dose is 0.7mg/kg, and is followed by weekly injections of 1mg/kg body weight. A maximum single dose should not exceed a total of 200mg. Therapy is for 12 weeks, but may be continued only in patients who respond to treatment. Raptiva should not be used in patients under 18 years old.

Raptiva is administered by subcutaneous injection. After

training in reconstitution and injection techniques, patients may self-inject if their doctor agrees.

The most common adverse reactions are flu-like symptoms including fever, headache, shills, nausea and myalgia.

For more information:

Hypurin issues

CP Pharmaceuticals has announced it is temporarily out of stock of five Hypurin insulin preparations.

The manufacturing issue has been resolved, and alternative presentations can be offered for the following products:

- Hypurin Bovine Neutral 3ml cartridges
- Hypurin Bovine Neutral 10ml vials
- Hypurin Bovine Isophane 3ml cartridges
- Hypurin Bovine Lente 10ml vials
- Hypurin Porcine 30/70 Mix 3ml cartridges.

The company expects full stock availability by mid-November.

SPECIAL REQUEST

Rosemont unveils multi-million dollar upgrade to liquid medicines facility

A major upgrading and refurbishment programme has been undertaken at the Rosemont manufacturing facility in Leeds.

This major investment has been made by Rosemont's American parent company, Savient Pharmaceuticals, Inc., in readiness to expand into the US market. The production tanks, the electrical system and the air

The new state of the art water system

handling systems have all been overhauled and updated, also a new state-of-the-art water system has been installed. Manufacturing capacity has been increased five-fold and the new systems are fully operational. Production is now back to normal following a very favourable inspection from the Medicines & Healthcare Products Regulatory Agency (MHRA). The company is preparing for an FDA inspection later in the year.

Rosemont's main filling line in action

Also in this issue

- Dr David Wright on tablet crushing
- Training Days update
- Win a coffee maker for your pharmacy
- Updated Swallowing Difficulties Protocol

Keep up your liquid intake and win a coffee maker for your pharmacy!

ROSEMONT is constantly seeking to provide the support you need. So tell us what we could do to help you (whether it is a new product you are being asked for, or how we can improve our service to you, or any other aspect) and you could win a coffee maker for your pharmacy.

Every pharmacist entering will receive a Rosemont bag containing a pen, post-it

notes, A5 wipe-clean board and a copy of the swallowing difficulties protocol.

The first three suggestions drawn at random on 23rd December 2004 will each receive a coffee maker for the pharmacy. Terms and conditions apply.

Just fax, post or email your replies to the Rosemont Marketing Department using one of the following: Fax to: 0113 242 1556
Post to: Rosemont Pharmaceuticals Ltd, Rosemont House, Yorkdale Industrial Park, Braithwaite Street, Leeds LS11 9XE.
Email to: marketing@rosemontpharma.com

Medicine By Mouse

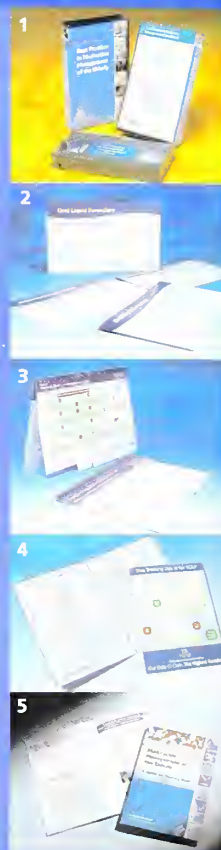

All pharmacists with a Rosemont account can place orders online by visiting www.rosemontpharma.com. Any pharmacist wanting to open an account can do so by logging onto the website.

Details about the full range of educational services available from Rosemont can also be found.

Available from Rosemont

The following educational tools for pharmacists are available from Rosemont Pharmaceuticals:

1. Best Practice in Medication Management - an educational video designed for use in teaching situations, particularly in Care homes.
2. Liquid Formulary - pocket guide to liquid medicines (currently being updated)
3. Swallowing Difficulties Protocol: Achieving Best Practice in Medication Administration - what to do when faced with a patient / customer who finds their medication hard to swallow.
4. Rosemont Training Days; Our Duty of Care: the Highest Standard, focusing on medication management of patients with swallowing difficulties.
5. Medication Management of the Elderly - booklet written by Ralph Greenwall BPharm (Hons) MRPharms

To obtain any of the above simply visit www.rosemontpharma.com or contact us on marketing@rosemontpharma.com

Rosemont Service

Rosemont is a leading supplier of oral liquid medicines, the services we offer customers include:

- 24 hour delivery service available on request
- High quality products and service
- Certificate of analysis for "Specials" upon request

Cool singing and dancing for Gaviscon

Reckitt Benckiser is investing £7 million in an advertising campaign for Gaviscon Cool over the next three months.

The package will include a £4.5 million TV campaign to be aired from October 18 until the end of December.

Entitled 'traffic cop', the new commercial uses the feel good hit *What a feeling* from the 80s film *Flashdance*.

Using a big screen movie setting, the commercial tells the story of a skilled but flustered female traffic cop who is so satisfied with her heartburn relief that she breaks into song and dance.

Her feeling of relief ripples out infectiously to motorists and passers-by who also start singing

and dancing.

The TV campaign will be reinforced by a nationwide outdoor campaign starting on October 25.

● The Gavilast 'devil' TV commercial will be back on our TV screens in December backed by a £1 million spend.

Numbing news for sore throats

Prestige Brands is backing its Ultra Chloraseptic spray for sore throat pain with a £360,000 advertising campaign.

Advertising will appear in women's and men's magazines from mid October until February.

Using the headline 'Not all sore throat remedies suck', the campaign highlights the new cherry flavour as well as featuring the original menthol flavour spray. Both products contain benzocaine in an antiseptic base.

The advertisements also encourage consumers to ask their pharmacist about the product.

Window and shelf point-of-sale material plus counter display units are available.

Slendertone puts its back into healthcare

Slendertone is expanding into healthcare with a drug-free product for the self-management of lower back pain.

Baxolve combines transcutaneous electrical nerve stimulation (TENS) therapy with a lumbar support belt to provide targeted, instant relief from lower back pain.

The belt also helps prevent the onset of further pain by providing support to the spinal and abdominal muscles. It can be used on an ongoing basis whenever pain arises for up to eight hours a day.

Clinical trials have shown that long-term use of TENS can reduce spend on medications by 55 per cent says Slendertone. Studies have also shown that using lumbar support produces a significant improvement in posture and mobility.

● The product is being launched during BackCare Awareness Week. The treatment of back pain costs the NHS an estimated £481 million per year.

Price: £129

Head lice campaign

GlaxoSmithKline Consumer Healthcare is backing its Quellada-M Cream Shampoo and Liquid with a hard-hitting educational campaign.

The initiative is designed to create a greater understanding about head lice and its treatment.

Posters and leaflets for pharmacists have an attention-grabbing headline 'Do you worry about head lice? - Don't'. The wording is spelt out with head lice.

The leaflet contains practical back-to-school advice for parents and uses sympathetic and reassuring language to help them deal effectively with a head lice outbreak.

Consumer leaflets will also be distributed via the Waiting Room Information service in 6,000 GP surgeries.

Practical ways to

This is the sixth of a series of 10 monthly articles by Anne Hutchings, and sponsored by Nucare, which will be published in book format next year

If you're a pharmacist running your own retail outlet(s) I recommend you look at four key areas if you want to improve business profits. These are, your business strategy, marketing, financial controls and business management.

Business Strategy

Does this sound like you?

- Working long hours?
- Not enough rewards?
- So busy working in your business that there is no time to plan ahead or formulate a clear vision of the future?
- Worried about the changes happening to pharmacy and how you will cope with these on top of everything else?

So what's the answer? The first step is to take some time out from the pharmacy in order to look at the business objectively. From here you can start to think creatively about the business and what you want to achieve from it. Ask yourself these questions:

1. Am I happy with what I am doing in the business? If not, how do I want to change this?
2. Do I have enough time away from the business? If not, how can I change things to achieve this?
3. Where do I see the business in five years? How does this fit with what I personally wish to achieve?
4. What are the most important things to me and what stops me doing those things?

Draw up a strategic five-year plan. This would typically include how the business will look in five years' time. You should incorporate:

- the services and products offered to your customers
- the customer base and geographical area
- the goals of your business, to increase turnover, gross margin, profitability, number of retail

outlets, staffing requirements etc

- a five-year financial plan to show the business growth and profitability.

The plan makes you recognise where you are now, where you want to be in five years time and enables you to identify what you need to do to get there.

Marketing

What are you doing to attract new customers and retain your existing customers? As part of your strategic plan you will have reviewed your customer base and their needs. Did you also look at where the prescriptions come from, locality of the surgeries, your relationship with the doctors and whether anything is in the pipeline which could affect future numbers of prescriptions?

Other points to consider are: **Existing products and services** Make a list of the different categories of main product lines. Have a look at the turnover of these monthly, quarterly, annually, what is the gross profit margin? Does your stock accurately reflect the needs of your customers? Which are your fast-moving lines and which are the most profitable? Could other brands increase the gross profit? Look at your displays – are the products placed in the best positions to obtain maximum sales?

With regard to the prescription side of the business which, for most small chemist shops, is the largest part of the turnover, are the prescriptions mainly NHS?

Do you have private prescriptions? Do you deal with drug addicts or nursing homes? Is there scope to develop any of these areas? What services do you provide? What could you provide?

Train your staff to ask customers the right questions. If customer needs are fully met, customers will feel they have received an excellent service and this will help to build loyalty.

Also, by fully understanding the customer's requirements, additional sales can be made.

EPoS

This could be a key element in increasing your profits. Many community pharmacists dismiss EPoS because of the cost and implementation time. The benefits and savings which can be achieved can far outweigh the cost and implementation factors.

The key benefits are:

- improved cash flow
- improved gross margin

- automatic re-ordering of stock
- low profit areas highlighted, ie what is and isn't selling
- pre-set reports providing analysis of profit margins and highlighting shrinkage
- Price monitoring and quick implementation of price changes
- identification of over- and under-stocking of products and lost sales.

Customer loyalty schemes

A way of encouraging your customers to return is to have a loyalty scheme. These can work in a number of different. One example is to have a points system where points are earned every time the customer purchases items. These can be redeemed at certain times of the year by way of discount against other items purchased in your shop.

Advertise your business

This can be done by producing leaflets which are handed out to customers in the pharmacy, leaflet

Sponsored by

your profit

increase the bottom line in your pharmacy

drops to local residents, adverts in local papers etc. The leaflets can be informative and/or used to advertise specific products. Do you advertise on the internet?

Give the business a facelift
I come across many pharmacies which have not had a refit for many years and are looking very tired and shabby. On the other hand, many successful pharmacists I meet are carrying out refits regularly, often around every seven years. There is no question that regular refits increase trade and therefore profitability.

Plan of review

Draw up a plan that you can use to review and improve your business. It is important to include the review points, action you will take and date by which you will have completed the task. A typical plan may look like the chart (although it may be more detailed than my example):

Financial review

The starting point is to review your current accounting system. One way of increasing profits is to have a good financial management system in place. This will consist of a computerized bookkeeping system with data input by someone appropriately skilled. There is no point in having a system which contains incorrect information, or a system which you do not have sufficient understanding of to enable you to extract financial information.

Action

- | Action | Completion date |
|---|-----------------|
| 1. Stock – Aim to improve gross margin by 2% by better purchasing and stock control | 1/12/04 |
| 2. Staff training – set up monthly training sessions to improve customer care | 1/1/05 |
| 3. Leaflets – Prepare information sheets for customers | 1/2/05 |
| 4. Premises – minor refit | 1/3/05 |

Financial Information

Information which will be of help to you:

Profit and loss account for the month and also for the year to date. It would be helpful if this also shows each item as a percentage of turnover.

For example, turnover for the month £60,000, salary cost £3,000. As a percentage of turnover this would be: $3,000/60,000 \times 100 = 5\%$.

Balance sheet to provide you with an overview of the current financial health of the business. A **breakdown of various items** such as:

Turnover, analysed by category such as NHS and OTC.
Creditors' list (unpaid bills).
Outstanding debtors (amount owed to you)

Using financial information to increase profits

Once you have the basic financial information you can use this to help you improve business performance by:

- Accurately measuring how you are doing. Ask your accountant to benchmark your business against other pharmacies.
- Monitoring/controlling costs.
- Forecasting ahead and

preparing budgets for forthcoming expenditure.

● Monitoring progress. For example if you have set a target to increase your gross margin by x% you can monitor the effectiveness through your monthly financial data.

● Using the data for what if scenarios. For example, what if I increase my OTC sales by 10% next year how much will my gross profit increase?

● Using the data as a basis for your future financial strategy.

basically a written summary of the way things are done in the pharmacy. Consider preparing SOPs for your staff covering issues such as training, roles and performance of their duties and a SOP for stock ordering and checking.

Before you start, consider the most important aspects of your pharmacy business, your objectives in writing the SOP and the best way of meeting these. Give the SOP to your staff for comments and feedback. It is important that they identify with what you are trying to achieve and are receptive to any changes.

SOPs for dispensing, staff training and stock control will help your pharmacy to run efficiently in your absence and free up your time, allowing you to focus on business developments.

There is no simple way to massively increase profits. It takes a systematic approach, involving good business management, financial monitoring, successful marketing and a strategy. If you find the prospect of tackling all these items daunting, break them down into small chunks.

You may be familiar with the question: How do you eat an elephant? Answer: one piece at a time. ☺

RUN BY PHARMACISTS FOR PHARMACISTS

Time to talk about **supervision**

Pharmacists were in expectant mood at UniChem's annual Convention in Sun City, South Africa, last week.

It is time to revisit the thorny issue of supervision, says NPA chief executive John D'Arcy.

"To keep the supervisory arrangements as they are will strangle the expansion of pharmacy services and frustrate the plans of both pharmacists and the Government for an expanded role," he told the UniChem Convention this week.

"But a total relaxation is likely to result in community pharmacy throwing the baby out with the bath water.

"The supervision issue needs to be bottomed out. Heaven forbid that I suggest we need a balanced package of measures, however we

do need to get some middle ground here."

A balance needs to be struck between freeing up pharmacists to get more fully involved in the cognitive aspects of the job, while preserving the important safety assurances associated with close pharmacist involvement and availability, he said.

Turning to the new contract, Mr D'Arcy said the difficult job of implementation was about to begin. "Performing under the old contract, while relatively labour intensive, was not, in the main, an overwhelming mental challenge. The new contract will change this."

Pharmacists will need to engage more formally with patients, with other healthcare professionals and with primary care organisations. They will need to make greater use of IT and enhanced record keeping. They will need to pitch for business with PCOs.

"The simple message is that you cannot sit back and wait. If you haven't already done so, you must start gearing up for the new community pharmacy business model," he urged. The NPA's new contract 'survival kit' will provide members with the information necessary to understand the contract, along with model SOPs to support the new roles.

With final details of the new contract in England and Wales imminent, conference chairman Mike Smith summed it up: 'The future for pharmacy is full of opportunity – but only for those who are prepared to take it.'

It wasn't all work in Sun City: convention delegates are pictured in the Cascades area, during a three-hour 'orienteering' tour of the complex to familiarise themselves with the facilities

Foster manufacturer links

Community pharmacists must continue to foster and grow their links with OTC manufacturers, primarily through the PAGB, advised CCA chairman and Boots' director of professional services, Digby Emson.

"OTC medicines are important to pharmacy. Depending on how you define the market, its value is worth up to £1.6 billion a year," he said. "Innovation in any market is important. Pharmacy needs the support of OTC manufacturers.

"We, in return, need to support them through the quality of our advice, in our merchandising and display methods and our accessibility to the public. POM to P switches will continue.

"Their availability will reflect the public trust in community pharmacy and the pharmacist. But they don't just happen. They are the result of significant investment by the industry. We must recognise and support that investment as a partnership for the future."

Health from a Welsh perspective

Wales and England will have the same pharmacy contract because the Welsh Assembly has not exercised its right to opt out of negotiations

It could have done so if it considered the arrangements would not support patterns of healthcare delivery in Wales.

However, according to Chris Martin, a pharmacist and chairman of Pembrokeshire Local Health Board, there is an opportunity for Wales to negotiate its own Drug Tariff and pharmacy contract. "Further policy divergence is likely to speed this process up," he said.

Wales has 708 community pharmacies and 1,292 pharmacists in the sector, and they are working in an environment which is moving away from the English pattern. National Service Frameworks are 'Welshified', said Mr Martin; community health councils have been retained; there are no private finance initiatives and, at present, no LIFT projects, which he described as "one of the biggest

threats to the community pharmacy network in England".

Prescription charges are to be phased out at a cost of £50 million over the next four years, starting with a £1 reduction this month. The OFT report on control of entry was rejected in Wales. "I hope the balanced package of measures is not deregulation by the back door," said Mr Martin.

The Welsh pharmacy strategy, Remedies for Success, is the profession's blueprint for the next 10 years, but Mr Martin was forced to acknowledge that progress on implementation has been slow to date.

"The Welsh Assembly has formally expressed its commitment to the strategy but has not yet supported it with funding," he said.

Neither has it produced a timeframe alongside the seven priority areas identified in consultations on the strategy (see panel, right).

"This is extremely frustrating ... we have the vision but because

of lack of funding we will fall behind England and definitely Scotland.

"The Welsh Pharmaceutical Committee has been tasked with reviewing progress and informing the health minister of areas of concern. They need to pull their finger out and drive this important agenda forward," said Mr Martin.

CPW aims to negotiate the enhanced services element of the new contract on an 'all of Wales' basis.

Full texts available

We are able to publish only an abbreviated report of the papers presented at the UniChem convention.

Seven high priority areas

- Establishment of a wider ranging and inclusive review of the future role, organisation and nature of community pharmacy in Wales
- Pharmacist access to the NHS intranet and the electronic patient record should be included in the development of IM&T in NHS Wales – no indication of timescale has yet been given
- Guidance to be issued to facilitate the introduction of original pack dispensing – due in 2002 but has not appeared yet
- Extension of supplementary prescribing rights to pharmacists
- Investment in student technician training places
- A thorough review of workforce planning processes
- A review (with the other home countries) of the future development of roles and career structures in hospital pharmacy

PCTs – are they the weak link?

Primary care trusts have to be prepared to put their hands in their pockets and commission new primary care services from pharmacists.

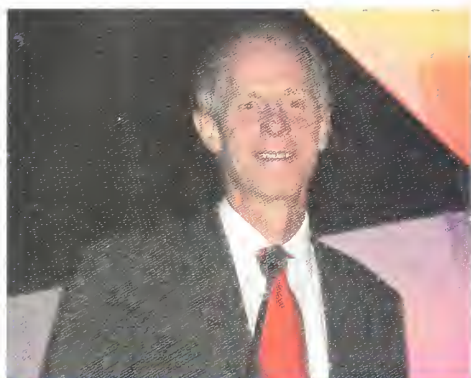

If they slow to commission additional services then community pharmacists will struggle to fulfil their potential under the new contract, warned chairman of the All-Party

Pharmacy Group, Dr Howard Stoa MP.

"This is one of my biggest concerns. While some PCTs have used their commissioning powers to great effect, many have been very slow to grasp their new strategic responsibilities. This is due in part to financial caution, but the size and make up of the average PCT is a major

contributory factor," said Dr Stoa.

"In many cases they simply don't have the necessary commissioning expertise or the relevant experience to ensure the delivery of new services. In the short term they may be forced to buy in help from outside if they are to fulfil their responsibilities. It is a problem the DoH needs to take seriously."

Dr Howard Stoa, chairman of the All-Party Pharmacy Group at Westminster

Call to 'decriminalise' single dispensing errors

The National Patient Safety Agency is working with the RPSGB to request Parliament to repeal Section 64 and 58 of the Medicines Act 1968 to 'decriminalise' a single dispensing error.

Pharmacists are sometimes reluctant to report patient safety incidents for legal reasons, according to Professor David Cousins, head of the NPSA. Although it is a legal technicality, it is true that the wording of the Act can be interpreted to mean that a dispensing error involving a POM is a criminal act.

Medication errors account for about a quarter of the incidents which threaten patient safety. There are about 850,000 adverse events in the UK every year, and the NHS pays around £600 million annually in settlement of clinical negligence claims, he said.

The NPSA is working to minimise patient safety incidents in the NHS, Professor Cousins said. Its mechanism for learning about system failures locally and nationally is outlined in the publication 'Seven steps to Patient Safety'. This includes the National Learning and Reporting System. An electronic version of the system will be accessible to all NHS Trusts and practitioners from early next year.

Large pharmacy multiples that have incident reporting systems will need to integrate them with the NPLS, advised Professor Cousins. The NPLS codes should replace existing systems and the ability to download anonymised data to the NPSA should be included in the reporting system.

Where there are no existing systems in place the NPSA has

made available an e-form on the internet. This means any healthcare professional with internet access can report incidents directly to the NPSA.

The design of medicines packs can be important in helping reduce incorrect product selection during dispensing. The safe design of medicines should be considered as an integral part of the procurement process, said Professor Cousins.

He was critical of the way some generic and parallel imported medicines were presented.

"Pharmacists procuring medicines have a professional responsibility to risk assess products they intend to use before considering price," he said. "Purchasing groups and individual pharmacists should adopt purchasing for safety strategies to safeguard their patients."

And if pharmacists can make selection errors when dispensing medicines from uniform packs, why should patients and carers find it any easier, he asked. "The NPSA intends to raise the issue of the safety of dispensed medicines in the NHS, and promote improved labelling and packaging. Patients are entitled to have instructions in font sizes they can read and assistance in differentiating medicine packs."

Earlier this year, in a bid to reduce dispensing errors, the US Food & Drug Administration decreed that bar codes should be included on all medicine packs within the next two years. The NPSA is planning a consultation of stakeholders over the next three months to determine if there is support for adopting a similar approach in the UK.

THE STRONGEST AAA BENZOCAINE SORE THROAT SPRAY AVAILABLE!

Not suitable for use in children under 6 years old

Fast & Direct pain relief for sore throats and minor infections
A local Anaesthetic – use every 2-3 hours
Benzocaine 1.5% w/w metered dose – 60 doses per pack

Better quality required to support self-care

Pharmacists must become more involved in determining which medicines and indications are switched from POM to P. It is not good enough to leave it to the pharmaceutical industry, Belfast pharmacist Dr Terry Maguire told the Convention.

"It was unfortunate that EHC was switched with severe age restrictions. This has severely restricted its effectiveness in tackling teenage pregnancy," he said.

"Likewise the OTC licence for NRT is much too restrictive. Sticking to the licensed indication means we are denying access to a large group of smokers who would benefit from its use. It should not have contraindications, and should be available to

smokers, both those who are planning to stop and those who just wish to reduce their risk."

Self-care will be expanded, promoted and supported by government in coming years, said Dr Maguire, who also sits on the Committee on Safety of Medicines. But he warned that the benefits from this policy will go to those who can support the required quality framework.

"Working on the CSM 1, along with other pharmacists have faced a difficult challenge in convincing other committee members of the benefits of having a pharmacist involved in the supply of OTC medicines," he said. "Concerns have been expressed about our ability to support quality in self-care of minor ailments."

These have been reinforced by covert assessments carried out by the Consumers Association. Pharmacists must be seen to add value, "and to date we have not been very good at doing this", said Dr Maguire.

This is despite the fact that most of the quality framework – in the form of SOPs for the sale of OTC medicines – are already in place. It just needs to be activated and monitored properly.

The increasing complexity and risk in some new OTC medicines calls for consideration of a 'Pharmacist only' category, he said.

This would not require new regulation: it could simply be created by the RPSGB through the ethical framework.

Where have all the P medicines gone?

The Pharmacy medicine category – one of pharmacy's key selling points – is currently failing because the supply of new 'Ps' has all but dried up, according to Steve Duncan, managing director of Moss Pharmacy.

Since the rules were simplified in 2002 there have been 23 applications to reclassify a medicine. Of these only six were from POM to P switches, and one was to extend the licensed conditions of an existing P medicine. The rest were P to GSL switches.

The government promised four years ago in its Pharmacy Plan to change the rules to make it easier for companies to change the legal status of their medicines. It has done this, said Mr Duncan, but companies aren't seeing it through and pharmacists are not pushing hard enough.

If pharmacists want more P medicines then "we'll have to go it alone", he suggested. Medicines such as Amoxycillin, atenolol,

Steve Duncan, Moss Pharmacy MD

lisinopril, salbutamol, sildenafil and trimethoprim were among those that could be switched.

"You might argue that we are not qualified to sell such products, but I disagree. We have to stop thinking about selling products and start thinking about selling packages of care that include medicines."

But pharmacists must prove to manufacturers that they will support them, said Mr Duncan. "We must link up with manufacturers who already have POM licences and lend them our backing and our data to support the switching process and the development of care programmes."

POM to P switches were one of what Mr Duncan described as the 'three Ps in pharmacy'. Public health; and partnerships with the NHS, manufacturers and patients were the other two.

Policy makers are well aware that if the long-term costs of the NHS are to be controlled, then more needs to be done in the public health arena. It is an area where pharmacists can do well, he said, but warned: "We all buy into the public health agenda, but it is not about glossy brochures, it is about doing simple things in a simple way in our pharmacies that the public feel comfortable with."

Quotes of the week

"The outcome of the new contract negotiations has positively surprised me. When agreement was reached on funding I was very surprised. It is a remarkable success. If the profession in the ballot rejects it, it will be a major setback"

Kenneth Clarke,
former health minister and
UniChem chairman

"The Royal Pharmaceutical Society has got some work to do in explaining to members how it represents pharmacists"

Rob Darracott,
director of corporate strategy
development, RPSGB

"Go across the street and look at your pharmacy. What does it tell you? Is it the kind of place you would go for health care? If not, do something about it!"

John D'Arcy,
NPA chief executive

How did Melanie Watt get 20 of the best minds in the business working for her pharmacy?

FHSAA abolition decision is 'matter for dismay'

The decision by the Department of Health to abolish the Family Health Services Appeal Authority has been condemned by a leading legal expert.

The FHSAA hears appeals on applications for new pharmacy contracts under the current regulations, but its functions will soon be taken over by the NHS Litigation Authority.

"The loss of the Appeals Authority is a matter for considerable dismay," says David Reissner, a partner at Charles Russell Solicitors. "Worse still, the Government is contemplating

the abolition of any right of appeal."

Given the poor quality of the decisions made by PCTs in this area, it is a "bleak prospect", he said. "Even today, many PCTs are repeatedly in flagrant breach of the most basic legal requirements in the Regulations."

Before the Appeal unit was created Mr Reissner said he regularly acted for clients who had to apply for judicial review of decisions, and family practitioner committees (as they were then) had to pay out a lot of money in legal costs.

"History will repeat itself if the Government abolishes the right of appeal. A right of appeal is important not only because of poor quality decision making by PCTs, but also because PCTs in future will have a direct interest in the outcome of applications."

"This cannot be fair if there is no right of appeal against their decisions."

Currently appeals in England without a hearing take 10 weeks on average to process. The same is not true in Wales, where appeals are currently taking about 14 months, said Mr Reissner.

More POM to P switches on the way

Read the MHRA business plan for clues about the next raft of POM to P switches, advised the PAGB's Helen Darracott

New POM to P switches currently in the pipeline include products for superficial eye infections, migraine, asthma, GI conditions, pain management and skin conditions, indicated a leading PAGB executive.

The MHRA, in its current business plan, identified these therapeutic areas as ones where it would like to receive switch applications, said Helen Darracott, director of legal and regulatory affairs at the PAGB.

The number of switches is likely to pick up in the future she said, as restrictions that prevented manufacturers advertising certain indications to the public were lifted in June this year.

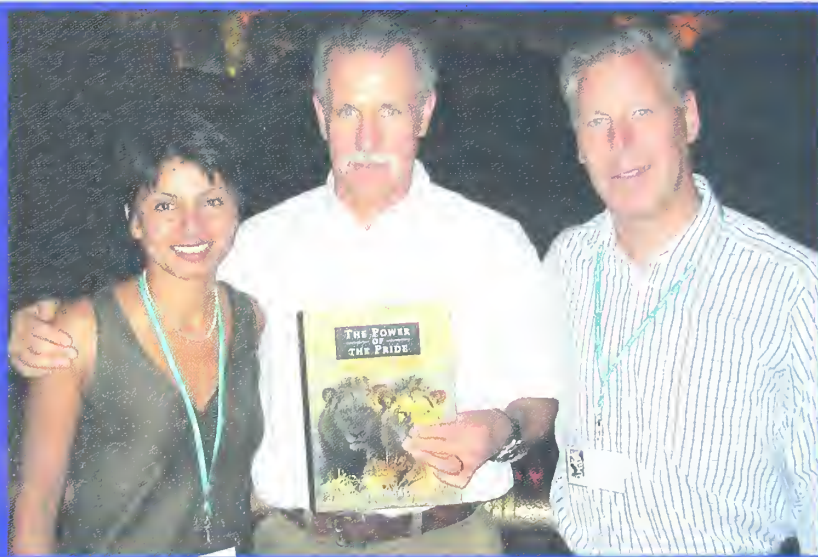

Until then OTC products such as aspirin 75mg or calcium supplements could not be promoted for cardiovascular or bone disease.

"This established the principle that if a product is available OTC it can be advertised to the public. Without the ability to advertise there was little incentive for companies to switch products, said Mrs Darracott.

"Lifting the advertising restrictions opens up a whole new range of conditions, many of which are longer term, chronic conditions."

Further changes coming into law next November will provide companies with a short period of market exclusivity which will be a further reward for innovation.

The 'Ceuta Symposium' has become a traditional part of wholesaler conventions. The Power of the Pride was a sell-out after Ian Thomas drew on his ten years' experience as a game warden at Londolozi to draw comparisons between the lions of the African savannah and the 'business jungle'. Ian (centre) is seen here with Ceuta's Annette D'Abreo and Edwin Bessant

'Your Portfolio' claims over 140 services

'Your Portfolio', the pharmacy support package being rolled out to UniChem customers, will offer over 140 different services and splits into three key areas, Alistair Marsh, general manager, pharmacy and retail services, told the Convention.

The retail area covers all aspects of promoting the business to customers. The dispensary area supports the pharmaceutical needs of patients – professional services, staff training, SOPs and offers a number of commercial packages. The business area looks at pharmacy operations and covers insurance, utilities and computer systems.

A number of pharmacy customers having been piloting Portfolio over the past 12 months, but the number of services have

UniChem's Alistair Marsh

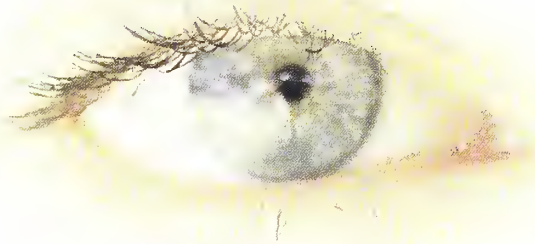

been recently developed and improved in line with market developments such as the new contract, he said.

New retail imagery has been devised to support Portfolio. Posters and leaflets will support the monthly healthcare promotional calendar.

A virtual pharmacy tour has been created to allow users move around the pharmacy and identify key services. "This shows the pharmacy as it would be if you allowed us to refit and design the pharmacy for you. This service will be available in early 2005," said Mr Marsh, but UniChem account managers will be able to demonstrate it to customers on their next visit.

A suite of 'plug and play' professional services developed by Pharmacy Alliance will be offered, along with training outsourced from organisations like GSK and the NPA (at reduced cost).

START A REVOLUTION IN DRY FEELING EYES

Dry feeling eyes is becoming an increasingly common 21st century problem! It is a condition that people have been suffering from for hundreds of years, but changes in everyday living such as the increased use of computer screens, central heating and air conditioning has led to a greater incidence.

Traditionally, patients would visit their optician with the problem, but increasingly pharmacists are able to recommend new, revolutionary products which offer highly effective relief from dry feeling eyes.

SYSTANE™ Lubricating Eye Drops from Alcon Laboratories offer unique protection for immediate comfort and long lasting relief from dry feeling eyes – particularly morning and end of day dryness. SYSTANE Lubricating Eye Drops have a highly developed formulation that gets to work as soon as the eye drop comes into contact with the eyes. It contains a unique polymer system which means that upon contact with your tears, the liquid eye drop turns into a thin protective gel layer. The gel-like barrier stays on the ocular surface longer providing fast and long lasting relief.

SYSTANE Lubricating Eye Drops are recommended by ophthalmologists and optometrists.

Pip code: 3038965 RRP: £5.99

WHAT CAUSES DRY FEELING EYES?

- Dry environment – central heating or air conditioning can increase the evaporation of tears
- Weather – windy weather can exacerbate the feeling of tired, dry eyes
- Wearing contact lenses or doing anything that reduces blinking may make your eyes more uncomfortable, such as watching TV or using a computer screen.
- Ageing – dry feeling eyes is more prevalent in people aged 45+ due to reduced tear production.
- Hormonal changes – women in particular can become more susceptible to dry feeling eyes when they approach the menopause
- Medication – certain prescription and over the counter medicines can lead to a reduction in wetting of the eye surface.
- Malnutrition – supplementing your diet with vitamins and minerals has been shown to help with dry feeling eyes.

WHAT ARE THE SYMPTOMS?

- Dryness
- Itchiness or scratchiness
- Burning or stinging
- Foreign body sensation
- Grittiness
- Sensation of pressure in the eyes
- Fluctuating blurring of vision
- Tired eyes
- Forced blinking
- Sensitivity to light

WHY SYSTANE?

- Fast and long lasting relief helps patients forget the discomfort of ocular dryness
- Patients retain a high degree of visual acuity, a common problem with other lubricating eye drops
- Liquid in the bottle - for easy application
- Gel in the eye - for immediate and lasting comfort
- Recommended by ophthalmologists and optometrists

Skin relief

Pharmacist Rod Tucker has specialised in skin conditions. Here he discusses practical aspects of managing acne, eczema and psoriasis via community pharmacies

Skin problems are relatively common. Indeed, it has been estimated that between a third and a quarter of the population will experience a skin problem at some time during their lives.

Though rarely life-threatening, skin diseases can have a profound psychological impact upon the sufferer, leading to feelings of social isolation, depression and, in some cases, even suicide.

There are thought to be more than 2,000 different skin disorders. But it has been estimated that, in primary care, over three-quarters of all consultations are for only four conditions: acne, eczema, psoriasis and leg ulcers. Given that at least three of these conditions can be managed to some degree using over the counter preparations, there is enormous potential for pharmacists to play a more active role in the management of these patients.

In this article, I want to provide some advice and tips on how pharmacists can manage patients with acne, eczema and psoriasis.

Acne

Acne vulgaris is a very common condition estimated to affect over 90 per cent of 16-year-olds. Patients start to notice that their skin becomes greasy and that

NO COMPROMISE!

Lice Attack™

Remember that even mild acne can have a huge psychological impact on the sufferer and the condition should never be trivialised

they develop white- and blackheads, the earliest acne lesions, which lead to papules and pustules.

When examining a patient it is important to assess the severity of their acne. Mild acne is considered to be mainly blackheads and whiteheads with a few papules (the typical red spots). Mild to moderate acne, which can be treated in the pharmacy, consists of more papules and pustules.

Another important factor to consider is the degree of scarring, the most common of which are the so-called 'ice-pick' scars. Patients with scarring should be referred to their GP since there are no truly effective treatments for scarring.

Finally, ask the patient about acne on other sites of the body, typically the chest and back, because if the acne is more widespread they should be referred to their GP as topical therapy alone becomes more difficult and costly.

In addition, acne in darker-skinned patients (such as Afro-Caribbeans) tends to leave post-inflammatory hyperpigmentation marks once a spot resolves. This can take many months to clear. As a result, acne in darker-skinned patients should be considered as moderate and referred to their GP.

Finally, remember that even mild acne can have a huge psychological impact on the sufferer and the condition should never be trivialised.

Treating acne: Mild to moderate acne can be effectively managed using over the counter therapies. **Benzoyl peroxide** is one of the most effective topical antimicrobial therapies for mild to moderate acne. The drug is effective against comedones (blackheads and whiteheads) as well as inflamed lesions (papules and pustules). However, many patients stop using benzoyl peroxide because they find it too irritating or experience dry, flaky skin.

Part of the problem, in my experience, is a lack of understanding about how to use benzoyl peroxide (*see Table for advice on its use*). Benzoyl peroxide is available in a wide range of formulations and, ideally, patients with very greasy skin benefit from using a gel, which has a drying effect, whereas patients with dry skin benefit from a cream preparation.

Benzoyl peroxide is available in different strengths and patients should start low and work up, though, in practice, for many patients the low strengths (ie 2.5-5 per cent) are sufficient. Once a spot has resolved it leaves a red mark on the skin and pharmacists should advise patients that this red mark (or macule) represents the end of the inflammatory process and will fade after a few weeks.

Other acne therapies include Salicylic acid. This has a comedolytic effect, ie breaking down blackheads and whiteheads, and is available as a facial wash (Acnisal). Some patients find this product effective, though in my experience, many find the preparation too

irritating and drying. **Betadine** skin cleanser is also a good choice for mild acne. It does, however, need to be left on the skin for three to five minutes to be effective.

Finally, **nicotinamide gel (Nicom)** has recently been relaunched as an OTC product. This works as an anti-inflammatory drug, reducing the redness associated with spots. Again, some patients find this effective, though, again for many, skin dryness is a problem.

The eczemas

There are several different forms of eczema for which pharmacists will be asked to provide advice or treatment.

When assessing a patient with eczema it is essential to obtain a full history of the problem. Some eczema sufferers also suffer from asthma or hay fever – ie they are atopic. Atopic eczema is very itchy and typically worse when the patient is hot. In addition, atopic eczema tends to be bilateral – affecting both arms and legs, in particular the flexor surfaces of the knees and elbows. Eczema can also occur on the hands of adults and one particular form, known as pompholyx, presents as itchy vesicles along the fingers and on the palms and soles of the feet.

Patients can also present with irritant contact eczema, which is a reaction to frequent contact with an irritant, or allergic contact eczema, which arises when a patient develops an allergy to a particular substance.

Irritant contact eczema is more common and is concentration dependent, so patients often find that their condition improves when

Using benzoyl peroxide

The following tips help patients get the best from using benzoyl peroxide products:

- Wash with soap and lukewarm water, dry their face and wait at least 20-30 minutes before applying a thin layer of the cream or gel all over the affected area, rather than just on the spots
- If using the cream/gel for the first time, leave on the skin for an hour or so then wash off. Gradually increase the contact period over the following days to allow the skin time to adjust
- Patients also need to be advised

that they will experience a drying effect resulting in flakiness, but to persevere with treatment as this dryness will subside after a week or two

- If dry skin becomes a problem, use an oil-free, non-comedogenic moisturiser
- Explain to patients that benzoyl peroxide is a bleach and will stain clothes and towels
- Warn patients that their acne will probably worsen in the early stages of treatment but will improve over time.

Allow patients to be involved in the process of selecting an emollient, otherwise they are less likely to use them

they are not exposed to the irritant. Another factor to consider is that itchiness and vesicles are more common in allergic and atopic dermatitis compared with irritant contact eczema.

Finally, patients may present with seborrhoeic eczema in the scalp and face, sometimes extending to the trunk.

Treating eczema: Emollients are the mainstay of eczema management, interspersed with short bursts of topical steroids.

However, surveys from the National Eczema Society show that only a small number of patients receive any instruction or information about how to use emollients. This is a potentially valuable role for pharmacists

who can explain and demonstrate how to use therapies prior to issuing prescriptions (see table for advice on how to use emollients).

Furthermore, it is necessary to allow patients to be involved in the process of selecting an emollient, otherwise they are less likely to use them. Pharmacists should obtain samples from pharmaceutical companies and allow patients to sample products prior to purchasing them or having them prescribed by their GP.

Once the skin becomes inflamed (in whichever form of eczema), emollients are not as effective – this is when a topical steroid needs to be used to control the ‘flare-up’. Treatment with topical steroids, such as

Promotion

Taking control of diabetes

As the leading supplier of diagnostic testing in the UK, Menarini Diagnostics are pleased to inform you of their exciting GlucoMen range of capillary fill blood glucose meters.

There are two main products to the GlucoMen range. Firstly the GlucoMen Glyco, which offers attractive features to both the patient and healthcare professionals. It is easy to train and use, and with its single button to access the 10-test memory, things are kept simple. The latest

addition to the range is the GlucoMen PC. This meter has extended features – a 350 memory, the ability to set target ranges, and results which can be downloaded to a computer (Dialogue software available separately).

All GlucoMen meters:

- Draw blood into the sensor by capillary fill technology.
- Needs a small sample volume of only 2ul.
- Have large easy to read displays.
- Use the same test strip, therefore reducing shelf storage space.
- Have a lifetime warranty.
- Display readings in 30 seconds.

Menarini's range of easy to use products include A1C test kits, blood glucose meters and urinalysis systems, which can run a range of routine tests, including glucose, protein, bilirubin, blood, leucocytes and nitrites.

GlucoMen Glyco Price £16.95 rrp.

GlucoMen PC Price £25.00 rrp.

FREEPHONE: 0800 085 2204

Or visit www.menarinidiag.co.uk for further information.

Brand focus

hydrocortisone or Eumovate (clobetasone butyrate), is effective in most cases and should be continued for at least seven days, even though clearance will occur after two to three days. Treatment of allergic and irritant contact eczemas also involve the use of topical steroids, though patients also need to use emollients frequently to enhance the barrier function of the skin, preventing entry of irritants.

In some cases of irritant eczema, cotton gloves may be required, though they should be taken off regularly as sweating might irritate the eczema.

Seborrhoeic eczema in the scalp often presents as an itchy scalp with dandruff and can be managed with antifungal shampoos such as Nizoral, or tar-based products (eg Polytar). Seborrhoeic eczema on the face can be treated with anti-fungal creams such as ketoconazole, which is available over the counter (Daktarin Gold) and is perfectly safe to use on the face.

Psoriasis

Psoriasis is a relatively common and chronic relapsing disorder, affecting up to 2 per cent of the population. Many patients will say that their condition improves in the summer months but relapses during the winter or during periods of stress. The diagnosis of the more common form of psoriasis, plaque psoriasis, is relatively straightforward as plaques occur on the extensor surfaces of the knees and elbows. Other forms of psoriasis can be more difficult to diagnose and patients should be referred to their GP if there is any uncertainty.

Treating psoriasis: Mild cases of psoriasis can be managed using emollients alone. Mild to moderate plaque psoriasis can be managed with the various coal tar preparations available over the counter. Products such as Exorex lotion are effective though improvements can take a few weeks to occur.

Preparations based on dithranol, such as Dithro-crème, are also effective and should be rubbed into plaques and left on for up to 20 minutes before washing off with soap and water. Dithro-crème is available in different strengths and patients should start at the lower strength and change strength every week. If Dithro-crème is effective,

Using emollients

The importance of emollient therapy for patients with eczema and psoriasis should be explained. Below are some tips on how emollients should be used:

- Emollients are best applied when the skin is moist (for instance, after a shower or bath) as this traps surface water and prevents the skin from drying out
- Ideally, emollients should be applied frequently throughout the day and this is possible if patients have access to smaller sample tubes which they can use at work
- Emollients should be smoothed

onto the skin in the direction of hair growth and not rubbed in. Rubbing creates heat in the skin which may cause further irritation

● It doesn't matter whether a steroid or emollient is applied first, what is important is that patients leave a gap of about 15-20 minutes between the application of either product

● Emollients are very important for patients with psoriasis. They should be applied prior to the use of other treatments (as well as in-between) to prevent the skin from becoming cracked and sore.

most patients will see improvements after three weeks. Patients should be warned that dithranol does cause staining of the skin and clothes but the skin staining resolves after a week or so.

One particular combination product which is effective is Psorin (a mixture of coal tar, dithranol and salicylic acid) but some patients find it also causes staining.

Patients should be told that once the skin becomes flat the psoriasis has resolved and they can stop treatment and continue with emollients alone.

Scalp psoriasis is another form of the disease which can be treated by pharmacists. Products such as Cocois ointment are extremely effective if used properly. Patients should be advised to part their hair and apply the ointment directly to the psoriasis plaques. The treatment can be left on overnight (or even for as little as an hour) and washed off with a tar based shampoo such as Polytar. ☺

THE PHARMACEUTICAL
INDUSTRY
ASSOCIATION

FREE LEGAL ADVICE

Chemist & Druggist's web site - www.dotpharmacy.co.uk - has introduced a service that offers pharmacists free legal advice from a leading solicitors' firm.

The service - dotLaw - is being run with the co-operation of Charles Russell, whose specialist legal fields include pharmacy matters.

Pharmacists are advised to e-mail their questions to pharmlaw@cmpinformation.com - along with their full name and the name of their pharmacy. The latter two details are for C&D's records only - pharmacists' identities will be kept anonymous when the answers are published.

All the questions and Charles Russell's replies, which will be available in two working days, will appear on a new dotPharmacy page called dotLaw.

Despatch from the Palace

Delegates at the UniChem convention had the heat, marauding monkeys and a nine ton elephant to contend with. Patrick Grice reports from behind the scenes in Sun City

Martin Mandelbaum had a 'near elephant experience' last week. A rugby-coaching LPC chief exec from down Sussex way, he found himself eyeball to eyeball with an edgy nine-ton bull elephant in the dark. This is the kind of non-scheduled event that can happen when you are in the front seat and the starter motor on your safari truck packs up.

The safari guide got "a bit hysterical", says Mr M – not surprising when you find out that in a similar incident last year an enraged bull pushed a vehicle over and trampled several people to death.

Mr M was in the Pilansberg National Park just outside Sun City, South Africa, working hard at last week's UniChem convention.

Nestling beside one of the oldest mountain ranges on earth, Sun City is a holiday oasis a couple of hours drive north of Johannesburg. At an altitude of 3,000ft, with the sun beating down it can get pretty hot, as Adam Mehegan (J&J.MSD) found after one and a half rounds of golf on the day he arrived (Englishmen, midday sun, etc).

Leading proceedings both at the conference and in the hotel bar

The Palace Hotel at Sun City, South Africa was home for delegates at the UniChem convention

was chairman Mike Smith. Having demonstrated a fecundity of geographical and zoological knowledge in the conference chamber he was keen to make sure the confident mood among the community pharmacists present carried over in any reportage.

Fresh from chasing the monkeys off the fruit bowl in his first floor room (shouldn't leave the windows open, Mike), his opening gambit at press briefing in the hotel lobby was typically subtle: "I'm sort of hoping to we might get some good press coverage. Pharmacists are confident ... people can do it ... we need to spread the message. Cocktails anyone?"

He didn't go as far as saying the future was Rosie, but he did say:

"The future for pharmacy is full of opportunity, but only for those who have the vision to see it." There was, it has to be said, an air of expectation among delegates which gave the whole convention an unusual buzz.

Seeing pharmacists actually feeling good about themselves and the way the future is unfolding was a novel experience.

Conference humour, though, was up to the usual standards. A chap called Anup from Solihull was helping with Mike's introductory words each day, which was presumably how he felt he could get away with cracks like: "What do you call an Indian with a crossbow?" Answer: "William Patel", and: "What do you call an Indian between two small buildings?" Answer: "Ali". Mike's best advice, though, was to those going on safari: "When you are bird watching, keep an eye out for tigers."

Commenting on the £1.76 billion funding for the new contract in England, the MP and former health minister Ken Clarke said: "Next time I shake hands with Barry Andrews (PSNC chairman) I shall feel for my wallet." Animal magic came up on a number of occasions. Rhino horn and Noel Wicks were mentioned in the same breath more than once. You can't go all soft when you are recently married, it would seem. Even the

scholarly David Reissner got in on the act with a quip about hard lawyers and over charging rhinos.

The Palace Hotel at Sun City was something special. It swallowed a record number of delegates with ease. The usual suspects could be found at the bar late each evening. John D'Arcy (NPA) vowed every morning that he was going to have an early night but never did. John Nuttall (United Co-op) maintained his reputation for sartorial elegance.

Martyn Ward (SSL) kept a fatherly eye on the organisers. As the convention manager in his previous job at UniChem, he could claim a vested interest. Meanwhile his successor in the role, Arthur Daines, was trying hard to get his tongue around Phuket, next year's destination. That's a 'Ph', not an 'f', Arthur!

The rumour that Rob Yateman (Pfizer) had to pack his clothes in a cardboard box for the transfer to Livingstone (it was a two centre trip, the last two days being spent beside the Victoria Falls) was, of course, untrue. What is true is that his sarcophagus-like suitcase was, to quote the lady from Carlson Travel, "too big" to fit on the charter flight to Zambia.

But to conclude, some words from Ian Thomas, a South African game warden and motivational speaker who wrapped up the conference programme, and which relate to the current state of pharmacy: "Change in nature is a sign of health". That doesn't mean you won't get eaten if you are unprepared, though.

Our encounter with an elephant was more relaxed than Martin Mandelbaum's night time encounter

Fired up by skin flare-up? Go for proven clear up

Nothing OTC clears skin flare-up faster than
Eumovate Eczema and Dermatitis Cream.

Early use is proven to clear skin flare-up in as
little as 5 days^{1,2} and break the destructive itch-
scratch cycle in as little as 3 days.^{2,3}

No wonder 88% of users rated it as better than
their previous treatment.⁴ And by advising regular
emollient use between attacks you can help stop
skin drying out too.

EUMOTHERAPY: FIRST CHOICE FOR SKIN FLARE-UP OF ECZEMA & DERMATITIS

Eumovate Eczema & Dermatitis Cream Product Information.
Presentation: Cream containing clobetasone butyrate 0.05%
w/w. **Uses:** Short-term treatment and control of patches of
eczema and dermatitis including atopic eczema and primary
irritant and allergic dermatitis. **Dosage and administration:**
Adults and children, aged 12 years and over: Apply sparingly to
the affected area twice a day for up to 7 days. If the condition
improves within 7 days stop treatment. If condition does not
improve in the first 7 days or becomes worse, or if after 7 days

treatment an improvement is seen but further treatment is
required, the patient should be advised to consult a doctor. To
be used in children under 12 years only on the advice of a doctor.
Contraindications: Known hypersensitivity. Broken skin or
skin lesions caused by infection with viruses (e.g. herpes
simplex, chicken pox), fungi (e.g. candidiasis, tinea) or bacteria
(e.g. impetigo). Acne vulgaris. **Precautions:** Absorption can
be increased by occlusion so treatment is limited to no more
than 7 days continuous treatment without occlusion. Treatment
should not be initiated at the same site for a third time without
medical advice. Only to be used for the treatment of eczema or
dermatitis as other conditions may be masked or exacerbated.
Should not be used on the face, groins, genitals or between the

toes. Medical advice should be sought in seborrhoeic dermatitis.
Consumers should be warned against letting the cream get in
the eye, as topical steroids can cause glaucoma. Do not use
with other topical corticosteroids or in the treatment of
psoriasis. **Pregnancy and lactation:** Use only on the advice
of a doctor. **Side effects:** Hypersensitivity. Exacerbation
of symptoms. **Legal category:** P. **Product licence number:**
10949/0346. **Product licence holder:** GlaxoSmithKline
Consumer Healthcare, Brentford, TW8 9GS, U.K. **Pack
quantity and RSP:** 15g tube - £5.49. **Date of preparation:**
May 2003.

Eumovate is a registered trademark of the GlaxoSmithKline
group of companies.

PIP Codes for Wholesaler's Internal Use	6
PIP Codes for Generics	7
PIP Codes for Appliances	61
Wholesalers/Distributors list	63
Suppliers	65
Disallowed Dressings & Appliances	68

Who makes what: a unique source list

The C&D Generics Supplement not only lists the seven-digit PIP Codes, so providing buyers with a unique source list for unbranded lines in pack sizes ranging from counter and dispensary to small-scale manufacture, but also lists the PIP codes which have been allocated to users for their own internal use.

The list is arranged so that users can trace alternative suppliers easily, and at the same time have the relevant PIP Code for ordering and product identification. Entries are updated in the weekly Price List Supplement when changes are notified to C&D by manufacturers. C&D would be pleased to receive details in writing, of any packs not currently listed and for which codes are required.

The following compilation rules have tried to be observed :

1. When the PIP code was converted from six to seven digits, a zero was placed before the old number, so retaining the existing check digit.
2. New PIP Codes are allocated randomly and start with the figure "1".

3. In the interest of continuity, priority in re-allocation of existing codes has been given to suppliers whose products carry the PIP Code on their packs.

4. Entries are generally under pharmaceutical name in order to bring all suppliers together for maximum buyer choice. However, counter packs will often be labelled with a popular synonym (eg Gec's linectus, Whitfields ointment). A cross-reference has been provided whenever products are shown under a synonym in suppliers' lists.

5. The names of brands containing a single active ingredient are listed at the beginning of each ingredient entry as a cross reference in conjunction with the C&D Price List.

6. The "DT" symbol indicates Drug Tariff pack sizes, which have been taken from the September 2004 edition.

The PIP Code

History

The benefits of a common code for pharmacy products have been long recognised, and over the years various working parties recommended the creation of such a code. In 1982 the National Pharmaceutical Association, in conjunction with Benn Publications (publishers of *Chemist & Druggist*), created the PIP Code in which they now hold joint copyright. This move had the support of several major pharmaceutical wholesalers.

Definition

The PIP Code is a product identifying number which has been allocated to goods distributed through pharmacies. All types of products are included and every pack size and colour or other variation has its own unique PIP Code number. The codes are published alongside each product entry in the *Chemist & Druggist* monthly Price List and weekly supplements, ensuring that a readily accessible and up to date PIP Code reference is widely circulated.

Initially, a six-digit code was chosen for ease of keyboard entry, but demand for the PIP coding system has necessitated the introduction of a seven-digit code. The last of these digits is a check digit (see p5) to minimise errors in recording.

Uses

The individual computer systems operated by manufacturers, wholesalers and retailers can be interfaced to recognise the PIP Code, which therefore provides a common language. This enables the retailer to

retain a freedom of choice of supplier and makes it possible for all involved in the distribution chain to benefit from streamlining their communications and merchandise handling systems.

Initially the PIP Code was used mainly as an interface between retailer and supplier for the purpose of placing and receiving orders, and virtually all pharmaceutical wholesalers can now recognise PIP Code when transmitted electronically. However, within retail pharmacy it is used increasingly for stock control and point-of-sale data capture. Most computer bureaux handle PIP Code data for clients, and many EPoS and dispensary systems make use of the PIP Code facility.

Computer users who choose to adopt the PIP Code as the primary code for their systems can avoid the time and expense of maintaining their own database. This is a considerable advantage to smaller businesses and pharmacies which have only limited clerical resources.

Developments

Requests for further information on the Code's use, and licence applications etc, should be addressed to:

Mr Richard Maw
PIP Code Administrator
National Pharmaceutical Association
Mallinson House
40-42 St. Peter's Street
St. Albans
Herts AL1 3NP
Tel: 01727 832161

PIP Code principles

The Pharmaceutical Interface Products Code Regulatory Authority is the National Pharmaceutical Association, which takes advice from a technical panel representing retail and wholesale PIP Code users, plus *Chemist & Druggist* (who maintain the NPA's master PIP Code file).

The code is based on computer codes used to maintain the C&D Price Service but has been augmented to incorporate a number of product categories not considered appropriate for publication in the C&D monthly Price List (such as some watches, confectionery, stationery).

Code users may find the following points of policy helpful:

General

1. Manufacturer and distributor codes are published in Section 2 of the C&D monthly Price List.
2. Within the seven-digit PIP Code, codes have been reserved for users' own requirements (see para 12), but some wholesalers have allocated part of the series to service items such as bags and bottles. Retailers should obtain details of such allocation from their usual suppliers before using this series as dump codes etc.
3. Discontinued items are deleted from the C&D Price List upon notification by the manufacturer but remain on the master file for reference. If a product is re-marketed by the same supplier within that period, every effort is made to use its former code.
4. Where there are minor adjustments to pack sizes the existing code is generally retained to help retailers monitor sales performance. When the trade unit alters there is no requirement to issue new codes.
5. Both branded and generic product codes can be issued in advance of product launch with full security and confidentiality. The allocated numbers are reserved on the C&D computer pending advice of launch. Manufacturers of ethicals are particularly asked to use this facility so that codes can be notified on their standard letter to wholesalers. Intercontinental Medical Statistics (IMS) and *Chemist & Druggist* have available a joint form (approved by ABPI and BAPW) for prior allocation of both SDA and PIP codes. C&D has its own PIP Code allocation request form for use by manufacturers who do not require a SDA code.

Variants

6. Products which have no variants (colour, flavour, etc.) are identified by a separate main code for each pack size, representing singles wherever possible. This code appears immediately before the trade price column in the C&D Price List.
7. Where products include variants the main code does not appear - instead there are individual codes in italic type beneath the entry. However, the main code is allocated to a variant (e.g. neutral, normal, white, original, small etc) in order to reduce confusion for code users.
8. Where variants are added to an existing range the main code will normally be retained as the variant code for the original version. If this variant is subsequently discontinued its code will remain the main code but will no longer be published.

Special cases

9. PIP codes for unbranded products are shown in the C&D Generics Reference Book, distributed free to all C&D subscribers, additional copies are available on request. This supplement also lists wholesalers accepting PIP Code for ordering purposes, Generic Suppliers and Disallowed Dressings and Appliances section.

Note: Branded generics (ie, where a prescription calling for the brand name alone is sufficient to identify absolutely the product required) are to be found in the C&D Monthly P. L. Branded products with a single generic ingredient are listed in the generics book under the generic name.

10. Certain surgical/sundries groupings are at present not fully covered by PIP Code. This applies particularly to products where the multitude of size and type variations is great and/or product developments are frequent, so that retailers are likely to rely on manufacturers' product number or full description for ordering from a wholesaler. However, some of the more standard and frequently prescribed brands and generic items (eg many NHS appliances) are coded in the C&D Price List and the Generics Supplement.

11. Products with an HP indication are packs and preparations only supplied to hospitals. Products are coded if manufacturers anticipate them being prescribed to out-patients.

12. Promotional products are coded using the 500-000 series. The categories for coding are 'Banded packs'; 'Price Marked packs' & 'counter merchandiser units'. These products are listed at the back of the supplement, and cumulate through the month before appearing in the back of the monthly price list.

Temporary and seasonal packs are not coded by C&D.

Codes within the 600-0000 & 850-000 to 899-999 are used by wholesalers etc., in accordance with the batches allocated to them by C&D, for their internal use. Retailers should use the 900-0000 series.

Queens Road, Ashford, Kent.

Check-digit calculation

The check (seventh) digit of the PIP Code is arrived at by using the following calculation:

1. Take each digit starting with units position then tens position and so forth and multiply by 1,2,1,2,1,2, etc.
2. Add up resultants of 1. (Add the digits not the products ie if resultant is two digits then add them together).
3. Subtract the figure at 2 from the next highest multiple of 10.
4. Answer is the modulus 10 check digit. If no remainder then check digit is zero.

To check

1. Take each digit (including check digit) and multiply by 1,2,1,2,1,2 (starting in units position).
2. Total resultants as before.
3. Answer should be an exact multiple of 10.

Example

$$\begin{array}{rcl}
 & 3 & 5 & 8 & 9 & 2 & 5 & \text{(original number)} \\
 \times & 1 & \times & 2 & \times & 1 & \times & 2 & \text{(multiplicands)} \\
 = & 3 & 10 & 8 & 18 & 2 & 10 & \text{(resultants)} \\
 = & 24 & & & & & & \text{(sum of digits)} \\
 & & & & & & & 3 + 1 + 0 + 8 + 1 + 8 + 2 + 1 + 0 \\
 30 - & 24 & & & & & & \text{(subtract from next multiple of 10)} \\
 = & 6 & & & & & & \text{(this result is the modulus 10 check digit)}
 \end{array}$$

Check

$$\begin{array}{rcl}
 & 3 & 5 & 8 & 9 & 2 & 5 & 6 & \text{(PIP code number)} \\
 & 3 & 10 & 8 & 18 & 2 & 10 & 6 & \text{(resultants)} \\
 = & 30 & & & & & & & \text{(sum of digits)} \\
 = & 0 & & & & & & & \text{(correct - exact multiple of 10)}
 \end{array}$$

Coding queries

Coding queries related to products published or to be published in the C&D Price List and Generics Reference Book should be addressed to Colin Simpson, Price List Controller, Chemist & Druggist, CMP Information Ltd, Sovereign Way, Tonbridge, Kent TN9 1RW (telephone 01732 377407).

Queries relating to codes held on the master file should also be addressed to Colin Simpson at the above address.

Matter of policy should be referred to Mr Richard Maw, PIP Code Administrator, National Pharmaceutical Association, Mallinson House, 40-42 St. Peters Street St. Albans Herts AL1 3NP (telephone 01727 832161) from whom, for NPA members printouts of the master file in alphabetical or numerical order may be purchased. Non-members can apply to C&D direct.

The PIP Code copyright is owned by CMP Information Ltd (publishers of *Chemist & Druggist*) and the National Pharmaceutical Association is the licensed administrator.

Technical panel

The PIP Code technical/consultative panel, set-up by the National Pharmaceutical Association to advise it on code maintenance and development, is chaired by Mr Richard Maw of NPA and has the following members: Sonia Garner (NPA information department), Nigel Cox (NPA IT), Colin Simpson (C&D Price List Controller, responsible for maintaining the PIP Code master file, the issuing of PIP Codes and their publication through C&D Price Services) Patrick Grice (Price List and Projects Manager), Darren Larkin (representing C&D Price Service), Andy Charlesworth (representing Numark Ltd), Robin Raymond (representing Gehe UK), Devyani Patal (representing UniChem ple), Col Michaels (independent retail pharmacist), Toni Olewicz (representing NDC Health), Craig Spurdle (representing Phoenix Pharmaceuticals).

Recommended International Nonproprietary Names

This publication shows the new names brought about by the implementation of the *European Community Directive 92/27/EEC*, which has been consolidated and is now *Directive 2001/83/EC*. These Directives authorised the use of rINNs in the labelling of medicines throughout the EC.

For further information refer to the MHRA web site at www.mhra.gov.uk

PIP CODES FOR WHOLESALER/DISTRIBUTOR INTERNAL USE

1. The 600-0000 & 850-0000 to 899-9999 series of codes are available for internal use by wholesalers/distributors under the control of the C&D Price Service.

2. C&D Price Service will issue wholesalers/distributors with blocks of codes from within the 600-0000 & 850-0000 to 899-9999 series on request. Those codes will be exclusive to that wholesaler or distributor.

3. Wholesalers will issue and maintain codes for their own internal use from within the blocks issued to them by the C&D Price Service. When that block is used up they should apply to C&D for a further block.

4. Code blocks issued to each wholesaler/distributor will be published in the Generies Guide twice yearly and will be
- available on request from C&D Price Service.

5. PIP Code users and IT systems suppliers should refuse to accept PIP codes from any wholesaler distributor that are outside their allocated block, and refer the originator to the C&D Price Service for a code block allocation.

6. In due course, administration of the 700-000 & 800-000 to 849-9999 series codes will revert to the C&D Price Service.

Wholesaler distributor generated codes which are within the 700-000 & 800-000 to 849-9999 series will no longer be recognised. Any product codes from these series that are still live should be recoded using a code from within the block issued. At least six months notice will be given.

Alphabetical List

At the beginning of some of the generic entries there is a further list of names in bold capital letters.

These names are of the brands which contain the single generic ingredient under which they are listed. This information is to allow for easy cross referencing with branded equivalents in the main C&D Price List.

Diamorphine Hydrochloride (M & A Pharmachem)

powder		
1g	107-7023	
2g	107-7031	DT
5g	107-7049	
25g	107-7056	

Diamorphine Hydrochloride (Macfarlan Smith)

powder		
2g	077-7078	DT
5g	077-7060	
25g	085-4471	

Diamorphine Hydrochloride (Martindale Pharms)

powder		
2g	103-7662	DT
5g	103-7670	
25g	103-7688	

Diamorphine Hydrochloride (Thornton & Ross)

powder		
5g	102-1211	

Diazepam (see DIAZEMULS, RECTUBES, STESOLID, VALCLAIR)**Diazepam (Alpha)**

oral solution 2mg/5ml
